PODBREZOVÁ

**USER'S**  
**HANDBOOK**  
STEEL TUBE & PIPE ■

13<sup>TH</sup> EDITION, MARCH 2016

## Dear business partners, ladies and gentlemen

this technical manual we prepared to contribute to the further development of our mutually good business relationships. The guide contains technical specifications for steel tubes and tubular semi-finished products produced in group companies of Železiarne Podbrezová Group. Technical details are the content of national or transnational standards and regulations, or even bilateral technical and delivery regulations or specifications. Products made out of tubes must at the same time meet the requirements of relevant laws and regulations relating to health, safety and the environment during its use. For this reason, the manual also gives a brief overview of standardization.

### Important warning:

In the countries of European Union the European standards (EN) were implemented (taken) into the system of national standards. The original standards are already invalid. Therefore, in business the original standards of individual countries should not be used anymore, but valid EN standards. Data from the original standards mentioned in overviews serve during the transitional period for the possibility of comparing individual parameters in the study of older technical documentation when examining the possibility of substituting the tubes supplied and under the original standards. GOST standards, U.S. standards (ASTM, ASME, ANSI, API) and JIS remain valid.

## Content

Standardization companies and standards .....	3
Steel tubes - classification, terms and definitions .....	3
Technical standards for steel tubes .....	3
Overview of the main characteristics of steel tubes .....	4
Tube dimensions .....	4
Ovality, eccentricity .....	4
Tube weight .....	4
Steel for tubes .....	5
Technical delivery conditions (TDC) for tubes .....	7
Tube testing .....	7
Quality management systems, certification, legislation .....	9
Management of quality .....	9

Tab. No. 56 Comparison of tensile strength and hardness according to Vickers, Brinell and Rockwell hardness .....	118
Tab. No. 57 Designation system for steels: EN 10027 -2 .....	119

## Standardization companies and standards

**International, globally valid standards are issued by two standardization organizations based in Geneva:**

**ISO (International Standards Organization)** – issues general standards.

**IEC (International Electrotechnical Commission)** – Issues standards for electrical engineering.

ISO standards apply globally and therefore usually they are not taken into the system of national standards. For steel tubes they are not frequently used. However, just for information, we show them in this handbook.

### European standardization

it is organized like the global one, however has up to three commissions. The first two are based in Brussels, the third in Sophia Antipolis (France):

**CEN (Comité Européen de Normalisation)** – issues general standards in Slovak referred to as European standards (EN). These EN standards can not be equated with previously issued EuroNorms. Standards for iron and steel are issued by the European Committee for Standardization of Iron and Steel (ECISS) and the relevant Technical Committees (TC) and subcommittees (SC).

**CENELEC (Comité Européen de Normalisation Electrotechnique)** – issues electrotechnical Standards

**ETSI (European Telecommunications Standards Institute)** – publishes standards for telecommunications.

### National standard institutes (offices)

Issues national standards. In the context of enlargement of the European Union, the EN standards are accepting (implementing) into the system of national standards (technical harmonization of standards). Unlike ISO standards EN standards are implemented without modification and nowadays they must repeal all conflicting national standards. In this context, there also has been a major change in the philosophy of the use of standards.

In the past, compliance with the provisions of standards was mandatory. Now two concepts appear to stand out: the validity and obligation of standard. The standard is valid, but, besides few exceptions its observance is not mandatory/binding. The standard specifies the recommended technical requirements which they do not have to be used. On the other hand two circumstances are standing out:

- if the standard is specified into the contract between the seller and the buyer then it becomes part of the contract and its requirements must be met
- if damages incurred as a result of solution, which have not met the requirements of the harmonized standards, the responsibility rests with those who did not meet the requirements of generally formulated by government regulation, because by the law, if STN assumes harmonized EN, it also become harmonized, and after its publication in the Bulletin, this standard can be used for assessing compliance with the technical requirements laid down by the government.

### Other standards

Under consideration comes mainly the company standards. They can not be in conflict with national standards.

Another group are the standards of professional societies, e.g. in the USA (AISI, ASTM, ASME, API, SAE).

Trading partners among themselves can enter into bilaterally binding technical and delivery conditions or technical specifications.

### Technical Standards

They are part of the legislation in force for the given area of industrial products. Specifically the linking of regulations set out for the individual tube groups.

## Steel tubes

### - Classification, terminology and definitions

Referred concepts for steel tubes are in STN (ČSN) 42 0044, 42 0045, 42 0046, EN 10079, ISO 6929 standards.

**Tube classification** is based on a number of points of view: the production method, the cross-sectional shape, treatment of tubes ends, and range of application of tubes.

**According to EN 10079** tubes belong to so-called long products. It is a product that has along the entire length permanent circular, or other hollow cross-section, it is open at both ends and has a relatively large length (ISO 6929).

**According to the production method** we distinguish between two large groups of tubes – seamless and welded. Each of this group can be divided according to the method of tube production (hot rolled and cold rolled production).

Part of tube group is also so called **hollow profiles**. They are seamless or welded tubes of circular, square or rectangular cross-section, used for production of steel structures for building industry or even for machine parts.

**Hollow bars** are seamless tubes of circular cross-section intended for the manufacture of machine parts by chip machining. From the first two groups of tubes they differ in qualitative and dimensional parameters that are chosen to meet the requirements for workability, heat treatment and surface quality components.

In this manual the products are **classified by application**, taking into account the method of production. Similarly are set up also the new EN steel tube.

### Technical standards for steel tubes

Technical characteristics of the steel tubes are concentrated in the relevant technical standards.

Tube parameters can be divided into three main groups:

- dimensions and their tolerances (depending upon production method of tubes)
- type of steel and steel conditions (supply)
- technical delivery conditions

Individual national standardization bodies use different procedures for data standardization for steel tubes. In practice, three options are used:

- each main group of parameters is contained in a single standard. Standards are linked by references to related standards. Dimensional standard includes a table of dimensions and their tolerances, steel standard contains its chemical composition and mechanical properties for various methods of tube manufacturing and condition of steel. The third standard of the technical delivery conditions (TDC) establishes all other requirements for tubes such as testing, acceptance, certificates, packaging, markings and the like. At the same time includes references to additional standards, where these activities are described (e.g. STN, ČSN standards).
- the second option is, when steel and its characteristics are included in the TDC standard and this includes the dimensional tolerances. The tube is described by two standards – dimensional, containing dimensional table and TDC standard (e.g. DIN standard).
- the third option – tube parameters are in one standard which contains also the dimensional table or selection from the general table of dimensions, which is the content of general dimensional standard (e.g. NFA, EN standards).

In practice, there are also cases where the seller and buyer enter into bilateral or TDC or the tubes are supplied according to the technical specifications of the buyer.

## Overview of the main characteristics of steel tubes

This chapter is a general description of the characteristics that serve as the basis for the description of individual particular types and groups of steel tubes. These are:

- Tube dimensions
- Steel for tubes
  - The definition and distribution of steel
  - System of marking steel for the tubes according to EN
- Technical delivery conditions (TDC) for tubes (excluding testing)
- Test of tubes
  - Types of testing
  - Types of inspection documents
  - Individual tests

### The tube dimensions

The tube dimensions are fundamental characteristics of tubes. For industrial purposes and general use the tubes are manufactured with diameters ranging from tenths of a millimeter to the diameter of a few meters.

Tube size must be given in such a way that it is fully defining the tube in this regard. For tubes of circular cross section, besides the length, three main dimensions emerge: outside diameter, inside diameter and wall thickness. For circular tubes two of the values are given. According to tube type the relevant dimensional tolerances are assigned to dimensions.

Dimensions of individual tubes are not created randomly, but are arranged according to the dimensional array of a specific system. The tube dimensions are in mm, in the USA and some other countries are given in inches (English „inches“, German „Zoll“). In this case, the tubes are also classified into two groups - „Tube“ are tubes for mechanical usage and for energy facilities and in inches is given the actual outside diameter. „Tubes“ are tubes used in pipelines for different types of media. Tubes size is given as nominal tube size, and up to 12 inches is given approximate size (luminosity) of the internal diameter of the tube (in more detail in the relevant types of tubes).

From dimensions of tubes after conversion to millimeters used in the SI system is created first and preferred array of outside diameters of steel tubes (1st series in EN 10220, DIN 2448, etc.). This does not mean that the tubes in the 2nd and 3 series are not used in practice. Dimensions in series 2 and 3 (for use in Europe are supplemented by the rounded off dimension in mm) are the standards for tube, used in the construction of power facilities and for tubes for mechanical usage.

The group of wall thicknesses has its origin in the inch system, which is used to express the size fractions. Wall thickness in Tubes forms the array of „Schedule“ (40, 60, 80, 120, ...), connected in some dimensions to the weight category (STD, XS, XXS). These values are converted to millimeters and form a group wall thickness. (Note: size - the value of Schedule e.g. 40 is not constant, but depends on the outside diameter of the tube). For Tube wall thickness the values are derived from the „scales“ BWG, SWG, possibly others. After conversion to mm, these values become part of tube wall thickness group for steel tubes.

For precision steel tubes used in Europe and in countries using SI units we established dimensional series with rounded off dimensions of the outside diameters and wall thicknesses.

### Ovality, eccentricity

Ovality (O) (non-circularity) is defined as the difference between the largest and smallest outer diameter at a given cross section of the tube. Ovality is allowed under framework of the outside diameter tolerances (EN 13 508).

$$O = D_{\max} - D_{\min} \text{ (absolute value in mm)}$$

$$O = 100 \cdot (D_{\max} - D_{\min}) / D_{\text{nominal}} \text{ (in\%)}$$

**Eccentricity (E)** (eccentricity) is a measure (size) of the difference between the centers of the outer and inner diameter. Eccentricity is permitted within the tolerances of wall thickness and is calculated from the thickness of the walls in one cross section:

$$E = (T_{\max} - T_{\min}) / 2 \text{ (absolute value in mm)}$$

$$E = (T_{\max} - T_{\min}) / (T_{\max} + T_{\min}) \cdot 100 \text{ (in\%)}$$

Tolerances (deviation limits) for outside diameter, inside diameter and wall thickness are always valid for only two ordered values. Limits of the third dimension can be arranged only for precision tubes.

**Tube straightness deviation (e)** indicates the maximum deviation of the tube from a line joining its two ends, where L is the length of the tube. It is given in percentages per unit length.

$$e / L \times 100\%$$

### Tube weight

**A theoretical weight (M) is calculated by the formula:**

$$M = 0.0246615 \times (D - T) \times T \text{ [kg/m], } D, T \text{ [mm]}$$

$$M = 10,69 \times (D - T) \times T \text{ [lb/ft], } D, T \text{ [in]}$$

This applies to carbon steel. For other types of steel, the value multiplied by the coefficient:

Type of steel	Specific weight	Coefficient
Carbon	7,85 kg.dm-3	1
Austenitic stainless	7,97 kg.dm-3	1,015
Ferritic and martensitic	7,73 kg.dm-3	0,985

The standards set out the permissible tolerances for tube weight from the theoretical weight.

Calculated table weight of pipeline tubes in **kg / m** (Table 7/Page 44 and Table 20/Page 59) may vary depending on whether in the calculation we used tube wall thickness in mm rounded off to one decimal place (release API 5L Standard until 2004), or to two decimal places (dimensions according to ASME B 36.10M regulation currently in force even for pipeline tubes according to API 5L Standards).

## Steel for tubes

Definition and classification of steel according to **EN 10020** - steel is defined as:

- material where weight portion of iron is higher than that of any other element
- content of carbon (C) is less than 2%, which is the current limit between steel and cast iron (except some Cr-steel, which may also contain more than 2%)
- steel contains other elements listed in the following table.

Table shows limit values for the elements of unalloyed and alloyed steel - column. No. 1 Limit values of chemical composition quality and grade steel - column. No. 2

Element		Weight proportion in %	
		1	2
Al	Aluminum	0,30	
B	Boron	0,0008	
Bi	Bismuth	0,10	
Co	Cobalt	0,30	
Cr	Chrome	0,30	0,50
Cu	Copper	0,40	0,50
La	Lanthanide (each)	0,10	
Mn	Manganese	1,65	1,80
Mo	Molybdenum	0,08	0,10
Nb	Niobium	0,06	0,08
Ni	Nickel	0,30	0,50
Pb	Lead	0,40	
Se	Selenium	0,10	
Si	Silicon	0,60	
Te	Tellurium	0,10	
Ti	Titan	0,05	0,12
V	Vanadium	0,10	0,12
W	Tungsten	0,30	
Zr	Zircon	0,05	0,12
Other elements (except: carbon, phosphorus, sulfur, nitrogen), (each)		0,10	

The coefficients for the determination of the eigenvalues for the alloying elements content

Element	Coefficient
Cr, Co, Mn, Ni, Si, W	4
Al, Be, Cu, Mo, Nb, Pb, Ta, Ti, V, Zr	10
Ce, N, P, S	100
B	1000

Note - Alloy Steel:

- 1 Is defined also in EN
- 2 Applies cast analysis
- 3 Minimum content of each element - see table
- 4 If there is the highest content of an element given, than for classification use 70% of this value (with the exception for Mn)

## System for steel marking for tubes according to EN

- EN 10027-1** identification systems of steel.  
**(ISO / TS 4949)** Abbreviated designation system. The basic symbols  
**EN ECISS IC10** The supplementary symbols  
**EN 10027-2** System of number marking

According to **EN 10027-1** steel grades are divided into two main groups:

- Group 1 - Steel designated according to the usage and mechanical or physical properties
- Group 2 - Steel designated according to chemical composition. These are divided into four sub-groups.

### Group 1

- S - structural steel for general use
- P - steel for pressure purposes
- L - steel for pipelines
- E - steel for machine parts (subsequent number indicates the minimum yield strength in N/mm<sup>2</sup>)
- B - steel for the reinforcement of concrete
- Y - steel for prestressed concrete reinforcing
- R - steel for rails
- H - flat cold rolled products
- D - flat products made of mild steel for cold forming
- T - sheets and strips
- M - sheets and strips for electrical purposes

For tubes are used the first four types of steel

### Group 2 - has 4 subgroups

- **non-alloy steel** (with regulated content of C) - marking: letter C and the number corresponding to one hundred times the mean range of the prescribed range for the content of carbon (C22)
- **non-alloy steel** with the content of Mn > 1% and **alloy steel** with content of individual alloying elements below 5% - marking:
  - a) the number corresponding to the hundredfold carbon content
  - b) chemical symbols of alloying elements in order of decreasing content of elements
  - c) numbers, which are defined by the alloying elements. Mean element content multiplied by the factor from the table and rounded to the higher whole number (25CrMo4).
- **alloy steel** with alloying addition (at least one element above 5%) - marking:
  - a) typical letter **X (X11CrMo9-1)**
  - b) number - one hundred times the mean carbon content
  - c) chemical symbols of alloying elements
  - d) numbers, which are defined by the alloying elements. Mean element content rounded off to the higher whole number.
- **speed steel** - designation
  - a) typical letters **HS (HS 6-5-2)**
  - b) numbers, which are defined by the alloying elements

Regulation **EN ECISS IC10** establishes additional symbols for **steel** (Groups 1 and 2). These symbols are placed at the end of the steel mark (e.g. S 275 J0). Additional symbols for **steel products** are given in Tables 1, 2, 3 and from the previous symbols must be separated by a plus sign (+) - e.g. S 275 J0 + A.

**Symbols for steel tubes**

- G - other characteristics (if necessary 1 to 2 digits)
- H - hollow profile or for higher temperatures steel according to the type of steel (S, P)
- L - steel for low temperature
- R - steel for common temperature (room temperature)
- M - thermomechanically rolled
- N - normalized or normalized rolled
- Q - heat treated
- T - steel for tubes

**EN 10027-2** contains the numerical system marking. The first number is 1 - steel, followed by two digits of steel group and the serial number of steel (**1.0402, 1.7218, 1.7386, 1.3339**).

See Tab. No. 57 on page 119

**Indicative comparison of old and new labeling of the European basic structural steel (steel group 1)**

In addition to introducing the letters for the field of application of tubes (S, E, P, L, etc.) two changes occurred:

- 1 Instead of the minimum value of tensile strength Rm is now in the steel marking listed value of the upper yield strength **ReH**
- 2 Old units kp/mm2 were replaced with new units N/mm2 (**MPa**).

Example:

Old steel markings:

Type of steel St35, St35.8, St37.0, St37.4, ČSN 11353, etc. have values in the old units:

Re min. = 23.5 kp/mm2, Rm min. = **35 kp/mm<sup>2</sup>**.

New steel markings:

Identical resp. similar to steel 235JRH S, E 235, P 235TR1 etc. have similar mechanical properties in new units:

Re min. = **235 MPa**, Rm min. = 340-360 MPa.

**Steel classifications according to STN EN 10020**

**Table 1**

Steel quality groups according to the chemical composition		Steel classifications in the main quality groups		
<b>NON-ALLOY STEEL</b>	>	<b>NON-ALLOY QUALITY STEEL</b>		<b>NON-ALLOY SPECIAL STEEL</b>
Contents of the elements does not reach the values listed in the table		For general requirements: - Impact energy - Grain size - Formability	+	Intended for refining and surface hardening etc.. Guaranteed minimum absorbed energy. Low content of non-metallic inclusions
<b>STAINLESS STEEL</b>	>	<b>BASIC PROPERTIES</b>		
Content of C. 1.2% max Content of Cr 10.5% min Content of Ni is less than 2.5% or higher than 2.5%				Corrosion resistant steel Creep resistant steel Heat resistant steel
<b>OTHER ALLOY STEEL</b>	>	<b>ALLOY QUALITY STEEL</b>		<b>ALLOY SPECIAL STEEL</b>
This is not stainless steel, content of at least one element reaches values in the table on the previous page		fine grained structural steel steel for rails and girders steel for heavy use alloy steel by Cu steel for electrical engineering	+	structural steel for pressure vessels for roller bearings tool steel high-speed steel special physical properties

• Classification of steel is also in ISO 4948-1 and ISO 4948-2

## Technical delivery conditions (TDC) of tubes

All tube requirements are concentrated in the TDC standards. The particulars are detailed for the individual types of tubes. An important part is the testing of tubes. Summary of the tests is given in the following chapter. The general TDC for steel and steel products are in EN 10021 standard. Symbols and definitions are in EN 10266. General TDC is also in ISO 404.

### Tube testing

Tube testing demonstrates that properties of the tubes are consistent with the requirements of the order and the relevant standards. The process is divided into three parts:

- determination of the type of test (EN 10021, EN 10204)
- determination of the type of inspection document (EN 10204, ISO 10474)
- selection of individual tests (particularly TDC)

The individual parts are connected and there is no possibility of any combination. Self testing is determined by TDC standard for the individual types of tubes.

#### • Non-specific and specific testing

##### Unspecified testing

- contains only mandatory tests according to the appropriate standard
- the test samples do not have to be from their own delivery
- testing station does not have to be independent at the tubes treatment plant

##### Specific testing

- besides the mandatory tests it contains additional optional tests
- samples of tubes are from supplies, their number is set by standard
- testing station must be independent at the tubes treatment plant

#### • Tests

- mandatory - according to the TDC standard
- optional - agreed when ordering tubes from selection according to standards

#### • Quality - TR 1, TR 2 depends on:

- chemical composition (Al content)
- values of mechanical properties (bending impact test)
- the type of test of tubes (specific and non-specific testing)

#### • Quality - NL1 and NL2 (steel grades for low temperatures)

- depends on:
  - chemical composition (S content)
  - values of mechanical properties (bending impact test)
- NL1 – use in low temperature
- NL2 – use in especially low temperature

#### • Test category - TC1 and TC2 depends on:

- provisions of standard
- chemical composition (carbon and alloy steel)
- the possible option when ordering of tubes (in C steel)

The categories differ from each other mainly by demand for nondestructive testing of tubes, or selection of tests.

#### • Documents about testing

Overview of kinds of attests in accordance with EN 10204 depending on the kind of testing:

##### Unspecified testing

- 2.1 Company confirmation (confirmation from the manufacturer, without the test results)
- 2.2 Company non-specific certificate (certificate from the manufacturer, the test results on the basis of unspecified testing)

##### Specific testing

- 2.3 Company specific certificate, test results based on specific testing. It is issued at this kind of testing when the manufacturer has no independent testing laboratory. If the laboratory is independent, instead of this certificate the 3.1.B certificate is issued.

3.1.A Inspection Certificate 3.1.A (officially appointed expert)

3.1.B Inspection certificate 3.1.B (company expert)

3.1.C Certificate 3.1.C (expert from customer)

3.2 Report 3.2 (company expert and expert from customer)

#### Release EN 10204 : 2004, ISO 10474 : 2013

2.1 Statement of compliance with the order

2.2 Test report

2.3 Not considered

3.1 Inspection certificate 3.1 (formerly 3.1.B)

3.2 Inspection certificate 3.2 (formerly 3.1.A, 3.1.C, 3.2)

In the EN is the Table - Context of categories of systems according to Directive 97/23 EC, Annex I, section 4.3, and the type of certificate.

#### The tests are divided into groups:

- **control of the chemical composition of the steel** - cast  
- product

#### • dimensional inspection

#### • mechanical properties \*

- tensile test
- (Hardness)
- bending impact test

#### • technological tests \*

- flattening
- drift expanding
- flanging
- bending
- ring tensile test
- hydrostatic pressure
- non-destructive methods

#### • water tightness test

- **Non-destructive testing** - longitudinal imperfections  
(Eddy current, stray fluxes, - transverse imperfections  
ultrasound) - laminar imperfections

#### • further testing (metallography, corrosion resistance, etc.).

- report attached on page 102 - 104

## Overview of the leak tightness tests and non-destructive testing

Table 2

Method	STN, ČSN	DIN(SEP)	EN ISO	ASTM	Dimensions	ISO
<b>Leak tightness tests</b>						
<b>Hydrostatic pressure</b>	42 0415.8	TDC Standards			D < 140 mm	
<b>NDT</b>	01 5047 01 5049 01 5054	SEP 1925	10 893 - 1		see NDT	9302
<b>Non-destructive tests (NDT)</b>						
<b>Eddy currents</b>	01 5054	(PRP 02-74)	10893 - 2	E 309	D > 4 mm, T > 0,5 mm	9304
<b>Stray fluxes</b>	01 5047	SEP 1913	10893 - 3	E 570	D > 32 mm, T > 2 mm**	9402
<b>Ultrasound</b> - L longitudinal imperfections	01 5028 - 2	SEP 1915	10893 - 10		D > 13 mm, T > 1(2) mm**	9303 9305
<b>Ultrasound</b> - Q transverse imperfections	01 5028 - 3	SEP 1918	10893 - 10	E 213		
<b>Ultrasound</b> - D laminar imperfections	01 5028 - 4	SEP 1919	10893 - 8			
Tube lengths - see the survey table for each group of tubes						

Notes: 1) \*\* values apply to ŽP, a.s.

## Leak tightness testing and NDT for pressure tubes according to EN standards

### Tube testing according to EN 10216 standard

Table 3

EN 10216 – 1	EN 10216 – 2, 3, 4
Quality TR 1 or TR 2	Testing category TC 1 or TC 2
Carbon steel - the type of quality is a part of steel brand	Carbon steel - choice of TC1 or TC2 Alloy steel - only TC2
<b>1. Leak tightness testing</b> Required for all tubes. Select from the methods: <b>1.1 Testing by internal overpressure</b> Selection is from the lesser value of pressures: 1.1.1 70 bar 1.1.2 the pressure value according to the formula $P = 20x(SXT) / D$ , where $S = 70\%$ of the minimum specified yield strength in MPa (pressure in bars) <b>1.2 Non-destructive testing according to EN ISO 10893-1 (E)</b> Electromagnetic testing - Eddy current. Preference from the methods: 1.2.1 encircling coil - the diameter of the borehole in reference to standard is dependent on the tube diameter D (Table is in the standard) 1.2.2 rotary probe coil – reference standard notch with depth of 12.5% of nominal wall thickness T (min. 0.5 mm, max 1,5 mm). Notch width is less than depth, length min 50 mm	
<b>2. Non-destructive testing - longitudinal imperfections</b>	
<b>2.1 Quality TR2</b> select from: 2.1.1 Eddy current (E) - EN ISO 10893-2 2.1.2 Stray flux (F) - EN ISO 10893-3 2.1.3 Ultrasound (U) - EN ISO 10893-10 Class of eligibility 3, subclass C	<b>2.2 Testing categories TC2 mandatory</b> select from: 2.2.1 Ultrasound (U) - EN ISO10893-10 Class of eligibility U2, subclass C 2.2.2 Stray flux (F) EN ISO10893-3 Class of eligibility F2 <b>Transverse defects (2.3) and laminar (laminar defects) (2.4) - testing only after agreement - Ultrasound</b> 2.3 Test for transverse defects EN ISO 10893-10 U2C 2.4 Test for duality EN ISO10893-8 U2 2.5 Measurement of wall thickness EN ISO 10893-12

In practice, pressure tubes are assigned into testing categories type TC2, tested by combining two non-destructive tests:  
 - Eddy current testing (testing leak tightness). Testing by overpressure at the request of the customer by agreement.  
 - Ultrasound for longitudinal defects (non destructive testing).

Legend and comments      NDT - Non-destructive examination (testing)  
 EN 10216-1 - Standard contains only carbon steel

### Testing methods

**E - Eddy Current - eddy current** (EN ISO10893 - 1 and 2). (Tests marked in overview 1.2.1, 1.2.2 and 2.1.1)  
 Encircling coil - levels of permissibility E1H, E2H, E3H, E4H (hole diameter in the reference standard, depending on the diameter of the tube D - see the table in the standards)

Rotary probe coil - levels of permissibility E2, E3, E4, E5. Testing the tubes with  $D \geq 4$  mm.

**F - Flux Leakage - stray flux** (EN ISO10893-3). (Tests marked in overview 2.1.2 and 2.2.2)

Levels of permissibility F2, F3, F4, F5, F6. Testing the tubes with  $D > 10$  mm.

**U - Ultrasound** - longitudinal imperfections EN ISO 10893 -10  
 - Transverse imperfections EN ISO10893-10  
 - Duality EN ISO10893 - 8 (for a wall thickness of 5 mm)  
 - Check the wall thickness EN ISO10893 -12 (from 4.5 to 5 mm of wall thickness)  
 (Tests marked in overview 2.1.3, 2.2.1, 2.3, 2.4 and 2.5.)

Levels of permissibility to EN ISO10893 - 10 - U1, U2, U3, U4, U5, U6

Subclasses A, B, C, D. Testing the tubes with  $D \geq 10$  mm and the ratio  $D/T > 5$  For smaller values by agreement, below the value of 4 the ultrasound test is not performed.

Levels of permissibility and the notch depth of a standard in % of the wall T:

1	3
2	5
3	10
4	12,5
5	15
6	20

Subclass - minimum depth of the notch (mm)

A	0,1
B	0,2
C	0,3
D	0,5

Subclasses A, B, C, D are valid for cold formed and machined tubes. Subclass C and D are valid for hot rolled tubes.

Other values of acceptance levels as in EN - after agreement.

Testing for transverse imperfections, duality and checking the wall thickness - only after agreement.

**For testing according to ASTM and API 5L** - see page 102 (leakage test), page 31 (NDT)

## Quality management systems certification, legislation

Handbook is primarily aimed at providing an overview of the technical parameters steel tubes produced by Podbrezová Železiarne, a.s. and Transmesa SAU. The tubes themselves and also the products and equipment whose parts consist of the tubes must also comply with the relevant national or industry laws, decrees and regulations designed to ensure the safety of operation, health and the environmental protection. Also the quality management system shall be in accordance with the relevant regulations and must be certified by authorized company.

### Management of quality

consists of several steps:

- certification of the quality management system according to international standards ISO 9001
- certification of the quality management system according to specific technical regulations
- certification of products and Approbation of products. This section consists of three areas:
  1. Product certification - certification that products are manufactured according to the standards and meet the requirements of the regulations (e.g. EU regulations)
  2. Products for construction use - Attestation of Conformity
  3. Approbation of products - affirmation of companies authorized to accept the tubes that the products comply with relevant standards

### Environmental Management System

For the introduction of the Environmental Management System (EMS) and its certification the ISO 14001 standard applies.

### Safety at work

Requirements for the management of health and safety protection at work are included in the international standard OHSAS 18001.

### The legislation

Steel tubes are divided accordance to their use to individual groups, where they are subject to different types and degrees of superior regulations. In the countries of European Union (EU) the **Directives** are valid for the relevant groups of products. Following the publication the individual countries must include them into their national legislation and **technical standards**.

**The Directives** stand out in the relevant documentation under the double designation. The Directorate-General (DG) elaborates proposal for the directive. Steel tubes are covered by DG Enterprise and Industry. Then based on the proposal of the European Commission's they are approved by the European Parliament. The Directives are marked as follows:

Year of issue / number /EEC respectively EC or if necessary EU (European Economic Community, after 1992 or 1993 only European Community).

These Directives acquire the Legal authority after they are issued in the Official Journal of the European Communities (Official Journal (EU - Collection of Laws, where the directive is placed under the corresponding number of law into this collection). In this Collection it is marked as OJ L number and date.

**EN standards** set out the requirements for specific groups of tubes.

In terms of legislation, there are three important group types of steel tubes:

- tubes for construction use
- tubes for pressure purposes
- tubes for parts of machines

### Tubes intended for construction use

They are classified as finished products and in placing them on the market, and as of 1.6.2013 a new legislation is valid for them.

- Regulation of the European Parliament and of the Council (EU) No. 305/2011 (CPR), by which they are establishing harmonized conditions for introduction of construction products on the market and repealing Council Directive 89/106 of EEC. Address-

ses the assessment and verification of the constancy of parameters of construction products and its introduction on the market by means of harmonized technical specifications.

- Harmonized technical specifications: harmonized EN and European Technical Assessment (ETA) issued on the basis of European Assessment Documents (EAD)
- Declaration of parameters (DoP) - issued by the manufacturer based on our assessment and verification of the constancy of performance and shall affix the CE mark.

Valid for tubes according to EN 10210, EN 10219, EN 10224, and EN 10255.

(EU) Regulation 305/2011 is directly applicable therefore does not need to be transformed into national legislation.

### Tubes for pressure purposes

#### Pressure equipment and legislation in EN

Brief Overview of the European regulations for pressure equipment with respect to the materials used:

1. Directive of the European Parliament and the Council 97/23 EC (PED 97/23 EC) applicable to specified pressure equipment. Pressure equipment within the meaning of this Directive withstand max. allowable pressure (PS) greater than 0.5 bar, and it is a pressure above the normal atmospheric pressure, i.e. excess pressure.
2. According to the Directive PED 97/23 EC pressure equipment is divided into three types, which are subject to the harmonized EN standards:

2.1 Steam and hot water boilers - EN 12952 and EN 12953

2.2 Pressure Vessels (unheated) - EN 13445

2.3 Metallic industrial pipeline - EN 13480

3. Parts 2 of these harmonized standards prescribed materials used for construction of equipment which is exposed to pressure. (In the case that other materials are used than those listed in Part 2 of the quoted standards, it is up to assessment whether these materials need to use a special procedure). Steel tubes must be supplied in accordance with EN 10216-2, EN 10216-3, EN 10216-4, EN 10217-2, EN 10217-3, EN 10217-4, EN 10217-5, EN 10217-6 (for carbon and low alloy steel).

Note: in the past, even on the international scale, the German regulations for pressure equipment TRD, TRB, TRR, AD-Merkblatt were used. For the transition period regulations AD2000 - Merkblatt were prepared, where the steel is according to EN.

### Tubes for mechanical application and machine parts

For Machinery see directive (Machinery Directive) No. 1998/37/EU For supplies of tubes for the automotive industry it is necessary that the supplier was certified according to ISO / TS 16949 regulations and (or) VDA regulations series 6.

ISO / TS 16949 regulation provides special (additional) requirements for the application of ISO 9001 standard in organizations for production of automobiles and their spare parts.

ISO 16949 regulations is by the individual producers further adapted to their specific needs.

Regulation were issued by organizations IATF - International Automotive Task Force (International Automotive Industry Association) and JAMA - Japan Automobile Manufacturers Association (Japan Automobile Manufacturers Association)

Regulation VDA 6 are quality standards of the German Automotive Industry Union (Verband der Automobilindustrie)

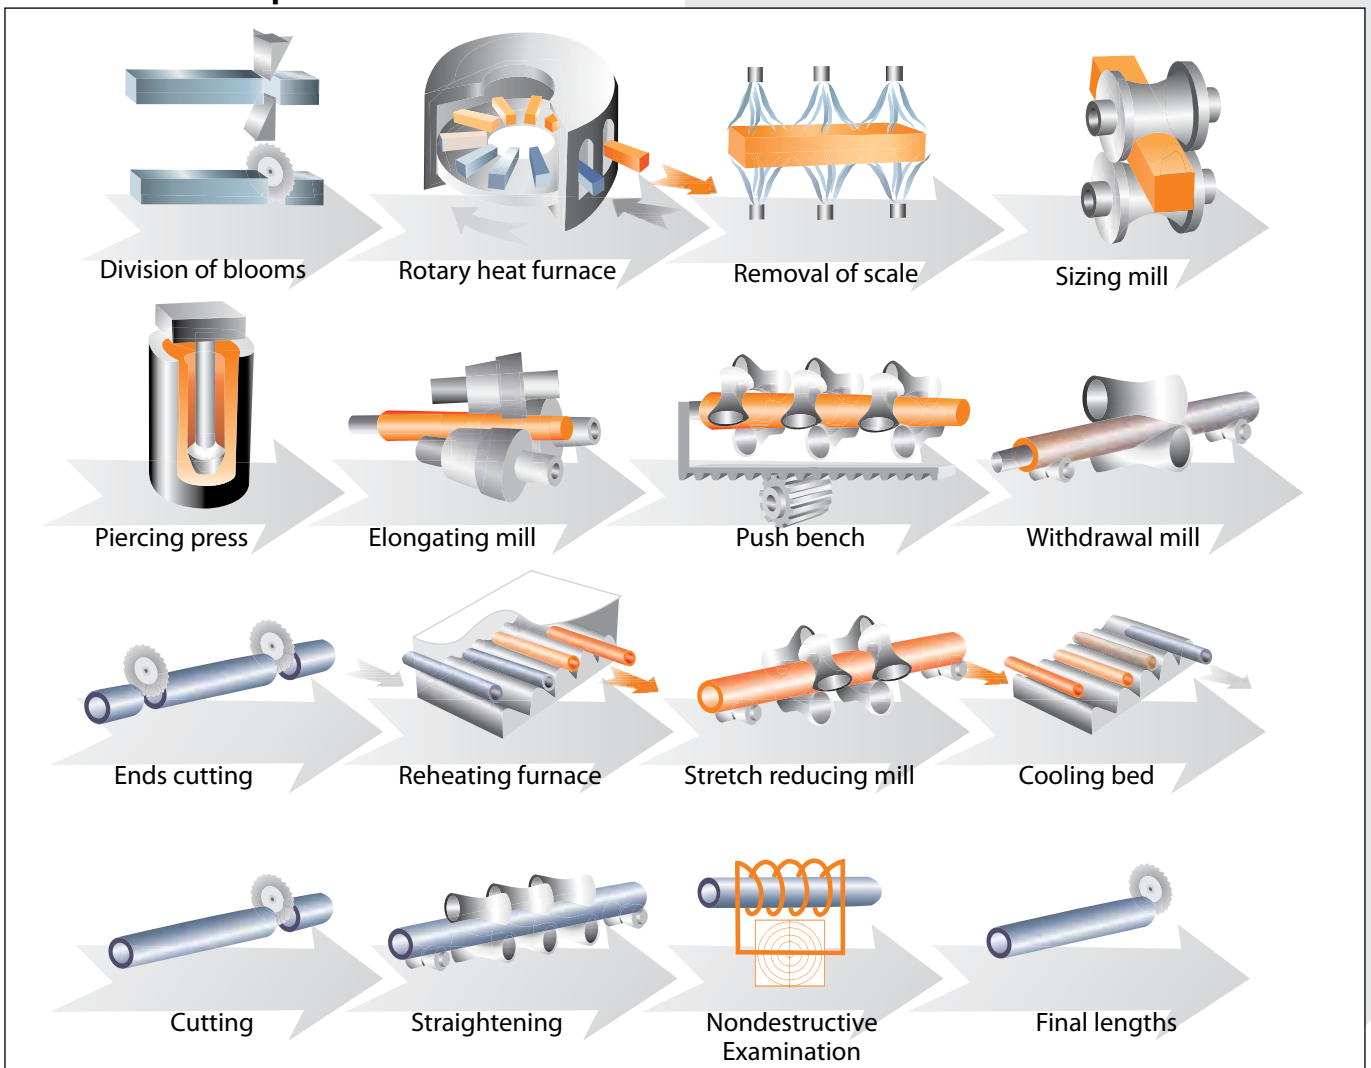

Regulation VDA 6.1 provides a quality management system audit (QM - System)

\* HF production facilities to 12,7 m + 30 mm (50 mm), over 12,7 m + 100 mm

### Notes:

- C – carbon equivalent formula:  $CEV(IIW) = C + Mn/6 + (Cr + Mo + V)/5 + (Ni + Cu)/15$ .
- steel are weldable, specific conditions see individual standards.
- rate cold workability is set by mechanical steel properties and is definite with regulations.

- tubes according to EN 10210 fulfilled requirements for „CE“ marking
- tubes according to ASTM A500 (steel Grade A, B, C, D), ASTM A501 and JIS G3444 (steel STR290, STK400, STK 490, STK 500, STK540) upon agreement.
- possibility of hot dip zinc coating of tubes is necessary to discuss at inquiry
- HFCHC - Hot Finished Circular Hollow Section

### List of dimensional standards and technical delivery conditions standards

EN 10 025	Hot rolled products of structural steels. Part 1-6.
EN 10 210-1,2	Hot finished structural hollow sections of non-alloy and fine grain structural steel. Part 1: TDC. Part 2: Tolerances, dimensions and sectional properties. See also ISO 630-2 (TDC) and ISO 657-14 (DS).
EN 10266	Steel tubes, fittings and structural hollow sections - Symbols and definitions of terms for use in product standards. DIN 1629 - Seamless circular tubes of non-alloy steel with special quality requirements. TDC.
DIN 2448	Plain end seamless steel tubes. Dimensions.
DIN 17100	Steel for general structural purposes. Quality standard.
DIN 17121	Seamless structural steel circular tubes for structural engineering purposes.
DIN 17124	Seamless circular tubes of fine grain steel for engineering purposes.
NFA 49-501	Steel tubes. Seamless or welded hot finished structural hollow sections. Dimensions. TDC.
STN 42 0250	ČSN 42 0250 Hot formed seamless tubes from steel class 10 to 16. TDC.
STN 42 5715	ČSN 42 5715 Hot formed seamless steel tubes. Dimensions.
STN 42 5716	ČSN 42 5716 Hot formed seamless steel tubes with smaller tolerances. Dimensions.
GOST 8731	Seamless hot-formed steel pipes. TDC.
GOST 8732	Seamless hot-formed steel pipes. Dimensions.
JIS G3444	Carbon steel tubes for general structural purposes.

### List of dimensional standards and technical delivery conditions standards

- EN 10 083 Steels for quenching and tempering. Part 1: General TDC. Part 2: TDC for non-alloy steels. Part 3: TDC for alloy steels.
- EN 10 084 Case hardening steel. TDC.
- EN 10 216 - 1 Seamless steel tubes for pressure purposes. TDC.  
Part 1: Non-alloy steel tubes with specific room temperature properties.
- EN 10 294 - 1. Hollow bars for machining. Part 1: Non-alloy and alloy steel.
- EN 10 297 - 1 Seamless circular steel tubes for mechanical and general engineering purposes.  
Part 1: Non-alloy and alloy steel tubes.
- DIN 1629 Seamless circular tubes of non-alloy steel with special quality requirements.TDC.
- DIN 1630 Seamless circular tubes of non-alloy steel with very high quality requirements. TDC.
- DIN 2448 Seamless tubes. Dimensions.
- DIN 17200 Steels for quenching and tempering. TDC.
- DIN 17204 Seamless circular tubes of steel for quenching and tempering. TDC.
- DIN 17210 Case hardening steels. TDC.
- BS 6323 Specification for seamless and welded steel tubes for automobile, mechanical and general engineering purposes.  
Part 1: General requirements. Part 3: Specific requirements for hot finished seamless steel tubes.
- ISO 2937 Plain end seamless steel tubes for mechanical application.
- ISO 2938 Hollow steel bars for machining.

Steel with boron content (kind 20MnB5) upon agreement.

\* List of steel – see table of chemical composition at pages 20, 21. This group of tubes can be delivered also according to DS for exact tubes (cold drawn) – see page 60 and other.

\*\* Tubes are not mechanically worked. D tolerance upon agreement.

#### Steel designation according to EN:

- steel for tubes for mechanical treatment:

steel E355 + AR, E 355 + N

E – steel for machine parts, 355 – minimum yield strength in N/mm<sup>2</sup>, +AR – heat treatment is not required,

+N – normalising annealed or formed

steel 20MnV6

steel designated by chemical composition – guaranteed mean C content 0,20%, guaranteed content Mn and V

+AR – heat treatment is not required, +N – normalising annealed or formed

- steel for machine parts:

steel without heat treatment after mechanical treatment

non-alloy steel E 235, E275, E315, E355

Condition +AR or +N

steel with specific impact qualities (fine-grain) E275K2, E355K2

K2 – guaranteed characteristic of impact energy 40 J (K) by temperature –20 °C

steel with heat treatment after mechanical treatment

steel C22E

C – steel with carbon content 0,22%, E – reference to maximum checked content of S and P

steel 38Mn6

– guaranteed mean C content and guaranteed Mn content

**Note:** Steel grades marking according to EN - see page 105

Steel 20MnV6+AR = E470, 20MnV6+N = E420J2, 20MnV6+QT = E590K2 (see also pages 115 and 116).

Alloy steel in EN 10083-3 see pages 120-121. Steel for mechanical tubes according to PN-H see also page 67.

## Seamless steel tubes for pressure equipments for room temperatures

Standards	Dimensional standards	Dimensional range	Dimensions				
			Tolerance D	Tolerance T	Lengths	Straightness	Tube ends
EN	10216-1  10305-1 (upon agreement)	Table 5/Page 40  Table 25/Page 69	D ≤ 219,1 mm ± 1 % min ± 0,5 mm  See page 62–65 (Cold formed precise)	D ≤ 219,1 mm ± 12,5 % min ± 0,4 mm  See page 62–65 (Cold formed precise)	Kinds: • random • fixed ± 500 mm • exact Indicative values: • D < 60,3 mm 5–6 m • D ≥ 60,3 mm / T < 7,1 mm 5–6 m or 10–14 m • D ≥ 60,3 mm / T ≥ 7,1 mm 5–6 m • longer upon agreement Precise length tolerances: • L < 6 m 0 + 10 mm * • L = 6–12 m 0 + 15 mm * • L > 12 m 0 + upon agreement	Allowed 0,0015.L for tube calculation to 1 m max. 3 mm	• square cut ends • free from excessive burrs • option: with beveled ends (see page 98)
DIN	2448  2391-1 (upon agreement)	Table 5/Page 40  Table 25/Page 69	D ≤ 100 mm ± 1 % min ± 0,5 mm D = 100–200 mm ± 1 %  See page 62–65 (Cold finished precise)	D < 130 mm • T ≤ 2Tn -10 % + 15 % • 2Tn < T < 4Tn -10 % + 12,5 % • T > 4Tn ± 9 % Tn – basic wall thickness according to DIN 2448  D = 130–320 mm • T ≤ 0,05D -12,5 % + 17,5 % • T > 0,05–0,11D ± 12,5 % • T > 0,11D ± 10 %  See page 60–67 (Cold finished precise)		Visually straight	• square cut ends • free from excessive burrs • option: with beveled ends (T ≥ 3,2 mm)
BS	3600	Table 5/Page 40	± 1 % min ± 0,5 mm  Cold finished tubes with less tolerances	≤ 3 %D ± 15 % > 3 %D -12,5 % + 15 %	• random • exact with tolerances: L ≤ 6 m 0 + 6 mm * L > 6 m 0 + 6 mm * + 1,5 mm per 3 m above 6 m	Visually straight	• square cut ends • free from excessive burrs

\* HF production facilities to 12,7 m + 30 mm (50 mm), over 12,7 m + 100 mm

### List of dimensional standards and technical delivery conditions standards

EN 10216-1	Seamless steel tubes for pressure purposes. TDC. Part 1: Non-alloy steel tubes with specified room temperature properties.
DIN 1629	Seamless circular tubes of non-alloy steel with special quality requirements. TDC.
DIN 1630	Seamless circular tubes of non-alloy steel with very high quality requirements. TDC.
DIN 2448	Plain end seamless steel tubes. Dimensions.
BS 3600	Dimension and masses per unit length of welded and seamless steel pipes and tubes for pressure purposes.
BS 3601	Carbon steel pipes and tubes with specified room temperature properties for pressure purposes. TDC.

#### Steel designation according to EN:

P – steel for pressure equipments  
 235 – minimum yield strength in N/mm<sup>2</sup>  
 T – steel for tubes  
 R – room temperature  
 1, 2 – group of quality  
 TR 1 - Fluid Transportation - General Purposes (see page 54)  
 TR 2 - Piping and Pressure Purposes (PED, AD 2000 Merkblatt W4)

#### Note:

Very often used steel St52 (according to DIN) is now produced as fine grain. For this reason the steel was moved to the part 3 of EN 10216, containing fine grain steel (New name is P355N).

### List of dimensional standards and technical delivery conditions standards

ASTM A106	Seamless carbon steel pipe for high-temperature service.	ASTM A450	General requirements for carbon, ferritic alloy and austenitic alloy steel tubes.
ASTM A192	Seamless carbon steel boiler tubes for high-pressure service.	ASTM A530	General requirements for specialized carbon and alloy steel pipe.
ASTM A209	Seamless carbon-molybdenum alloy-steel boiler and superheater tubes.	ASTM A556	Seamless cold drawn carbon steel feedwater heater tubes.
ASTM A210	Seamless medium-carbon steel boiler and superheater tubes.	ASTM A692	Seamless medium-strength carbon-molybdenum alloy steel boiler and superheater tubes.
ASTM A213	Seamless ferritic and austenitic alloy-steel boiler, superheater and heat-exchanger tubes. ASTM 335	ASTM A999	General requirements for alloy and stainless steel pipe.
	Seamless ferritic alloy-steel pipe for high-temperature service.	ASTM A1016	General requirements for ferritic alloy steel, austenitic alloy steel and stainless steel tubes.

\* The tubes according to standard ASTM A 556 only as straight ones.

- ASTM 335 Standard specification for seamless ferritic alloy steel pipes for high-temperature service.  
 JIS G 3456 Carbon steel pipes for high temperature service.  
 JIS G 3458 Alloyed steel pipes.  
 JIS G 3461 Carbon steel boiler and heat exchanger tubes.  
 JIS G 3462 Alloy steel boiler and heat exchanger tubes.  
 PN-H 74 252 Seamless boiler steel tubes

#### NDT of boiler tubes according to ASTM (ASME SA) rules

Alloy steel tube and pipe according to standard ASTM (ASME) A 209, A 213, A 335 - it is recommended to test the tube with combination of two NDT methods - usually according to ASTM E309 and ASTM E213.

Reference standards:

ASTM E213 (ultrasonic) - the depth of the notches shall not exceed 12 1/2 % of T. (According to agreement 10% or 5%)

ASTM E309 (eddy current) - max. diameter of drilled hole:  
 for tube: 0,031 in (0,8 mm)  
 for pipe: see Table in Standards A999

ASTM E570 (flux leakage) - values as in Standard ASTM 213.

## Seamless steel tubes for pressure equipment of fine-grained steels

Standards	Dimensional standards	Dimensional range	Dimensions				
			Tolerance D	Tolerance T	Lengths	Straightness	Tube ends
EN	10216-3	Table 5/Page 40	Hot finished: D ≤ 219,1 mm ± 1 % min ± 0,5 mm  Cold finished: ± 0,5 % min ± 0,3 mm  Delivery by $d_{min}$ a $T_{min}$ upon agreement (Page 26)	D ≤ 219,1 mm ± 12,5 % min ± 0,4 mm  ± 10 % min ± 0,2 mm	Kinds: • random • exact  Indicative values: • D < 60,3 mm 5–6 m • D ≥ 60,3 mm / T < 7,1 mm 5–6 m or 10–14 m • D ≥ 60,3 mm / T ≥ 7,1 mm 5–6 m • longer upon agreement	Permissible 0,0015.L for tube conversion to 1 m max. 3 mm	• square cut ends • free from excessive burrs • option: with beveled ends
	10305-1 (upon agreement)	Table 25/Page 69	Cold finished - precision See page 62 - 65		Exact length tolerances: * • L < 6 m 0 + 10 mm • L = 6–12 m 0 + 15 mm • L > 12 m + upon agreement – 0		
DIN	2448	Table 5/Page 40	D ≤ 100 mm ± 1 % min ± 0,5 mm D = 100–200 mm ± 1 %	D < 130 mm • T ≤ 2Tn – 10 % + 15 % • 2Tn < T < 4Tn – 10 % + 12,5 % • T > 4Tn ± 9 % D > 130 mm See page 22  Tn – basic wall thickness according to DIN 2448	Kinds: • random • fixed ± 500 mm • exact  Indicative values: • D < 60,3 mm 5–6 m • D ≥ 60,3 mm / T < 7,1 mm 5–6 m or 10–14 m • D ≥ 60,3 mm / T ≥ 7,1 mm 5–6 m • longer upon agreement	• visually straight • upon agreement	• square cut ends • free from excessive burrs • option: with beveled ends T ≥ 3,2 mm
	2391-1 (upon agreement)	Table 25/Page 69	Cold finished - precision see pages 62 - 65		Exact length tolerances: * • L ≤ 6 m 0 + 10 mm • L ≥ 3 m + 1,5 mm/m max 15 mm		

\* HF production facilities to 12,7 m + 50 mm (30 mm), over 12,7 m + 100 mm

### List of dimensional standards and technical delivery conditions standards

DIN 2391-1	Seamless precision steel tubes. Part 1: Dimensions. DIN 2448 Plain end seamless steel tubes. Dimensions.
DIN 17179	Seamless circular tubes of fine grain steel for special requirements. TDC.
EN 10 216-3	Seamless steel tubes for pressure purposes. TDC. Part 3: Non-alloy and alloy fine grain steel tubes.
DIN 2448	Seamless tubes, dimensions.

### Designation of steel according to EN:

- P – steel for pressure equipments
- 355 – minimum yield strength in N/mm<sup>2</sup>
- N – normalized or normalising formed
- NH – high temperature steel
- NL1 – low temperature steel
- NL2 – special low temperature steel

**Note:** Fine grain steel – ferritic grain size 6 or finer according to ASTM E112.

49-215	TU 42BT	Cold finished • normalized N		• product analysis • tensile test • flattening • drift expanding • visual • dimensions • NDT • leak tightness	49-001 Typ A Typ B Typ C			

### Designation of steel for low temperature according to EN:

P – steel for pressure equipments

215 – minimum yield strength in N/mm<sup>2</sup>

N – normalized or normalising formed

L – low temperature steel

Alloy steels are designated according to the chemical composition - see page 9

### Test category:

Non alloy steels - TC1 or TC2 upon agreement in order

Alloy steels - TC2 only

### List of dimensional standards and technical delivery conditions standards

UNI 4991	Seamless and welded steel tubes with plain ends. Dimensions.
UNI 5949	Special unalloyed and alloyed steel seamless tubes with low temperature impact test.
STN 42 0165	ČSN 42 0165 Sheets and pipes of ferritic – perlite steel with guaranteed impact properties at low temperatures. TDC.
STN 42 5715	ČSN 42 5715 Hot formed seamless steel tubes. Dimensions.
STN 42 5716	ČSN 42 5716 Hot formed seamless steel tubes with smaller tolerances. Dimensions.
STN 42 6710	ČSN 42 6710 Cold drawn seamless tubes with normal tolerances from steel class 11 – 16. Dimensions.
STN 42 6711	ČSN 42 6711 Precision seamless steel tubes. Dimensions.
ANSI/ASME B 36.10	Welded and seamless wrought steel pipe. Dimensions.
ASTM A333	Seamless and welded steel pipe for low-temperature service. TDC.
ASTM A334	Seamless and welded carbon and alloy-steel tubes for low-temperature service. TDC.
ASTM A450	General requirements for carbon, ferritic alloy and austenitic alloy steel tubes. TDC.
ASTM A524	Seamless carbon steel pipe for atmospheric and lower temperatures. TDC.
ASTM A530	General requirements for specialized carbon and alloy steel pipe. TDC.
ASTM A999	General requirements for alloy and stainless steel pipe.
ASTM A1016	General requirements for ferritic alloy steel, austenitic alloy steel and stainless steel tubes.
ISO 9329-3	Seamless steel tubes for pressure purposes. TDC. Part 3: Non-alloy and alloy steel tubes with specified low temperature properties.

Notes to Table 5:

- The dimensions of steel tubes in this table are taken from the applicable European standards EN 10220 – Seamless and welded steel tubes – Dimensions and masses per unit length. This standard replaced previously existing national standards DIN, BS, NF A and other standards. The dimensions represent the current production program of steel tubes from Podbrezová (other than **precision tubes**, whose dimensions are listed in other tables for precision tubes). Outside diameters are in the standard divided into three series. Column 1 shows the so-called preferred dimensions (series 1), to be used for piping systems. For pipelines made from pipes of series 1 is produced all necessary accessories (fittings, valves, etc.). The dimensions of this series correspond **approximately** pipe size according standards ANSI and API 5L, where the outside unit SI are also used inch (US Customer Units). (See also section 6).
- Depending on the size of the outside diameters, wall thickness and their combinations are the tubes (final dimensions) produced by hot forming (hot finished by rolling) or by end forming (cold finished by drawing).  
Besides technological possibilities tube production method is also affected by the requirements of customers on the technical parameters of tubes.
- Method of production (hot finished or cold finished) affects the price of tubes. Price matters but not covered by this guide.
- Informative – hot finished tubes are supplied from Podbrezová from the outside diameter D ≥ 26,9 mm and wall thickness T ≥ 2,6 mm. These tubes in

Tolerances depend on method of manufacture, steel grade and heat treatment.

Tolerances [mm]		
Outside diameter	Tolerance of outside diameter	Tolerance of wall thickness
D ≤ 219,1	±1% alebo ±0,5 mm*	±12,5 % alebo ±0,4 mm*

\* bigger value is applied  
see also values presented in national standards

Dimension tolerances according to ISO 1129	
Outside diameter	Wall thickness
D <sub>2</sub> = ±1 %, min ±0,50mm	T <sub>2</sub> = ±12,5 %, min ±0,40 mm
D <sub>3</sub> = ±0,75 %, min ±0,30mm	T <sub>3</sub> = ±10 %, min ±0,20 mm
D <sub>4</sub> = ±0,50 %, min ±0,10mm	T <sub>4</sub> = ±7,5 %, min ±0,15 mm
	T <sub>5</sub> = ±5 %, min ±0,10 mm

 cold drawn

 hot rolled

 dimensions according to standard EN 10210-2

 standard wall thickness of specific outside diameter according to DIN 2448

the table are highlighted in color. Production border dimensions of tubes (eg. tubes with thick walls) upon agreement. Other dimensions and precision tubes are produced by cold forming (cold drawing).

- Russian standards and currently already replaced standards ČSN and STN also contain the tubes with other nominal dimensions than those listed in table. The supply of these tubes is possible by agreement. It is the outside diameter 28, 76, 89, 102, 114, 121 and 140 mm and wall thickness 2,5 / 2,8 / 3 / 3,5 / 5,5 / 6 / 6,5 / 7 / 7,5 / 8,5 / 9 / 9,5 / 12 mm.
- Dimensions of steel tubes according to U.S. standards (Tubes and Pipe), API standards, pipes for threading and tubes and pipe supplied by Japanese standard JIS are listed in other tables of dimensions.
- The professional literature also contains the standards ISO. For dimensions and weight of steel tubes with plain ends valid standard ISO 4200, system of tolerances is in standard ISO 5252. ISO 1129 contains dimensions, tolerances and weight of steel tubes for boilers, superheaters and heat exchangers.
- EN standards valid for individual types and groups of steel tubes (eg. tubes for pressure equipment) also contain its own dimension table. Dimensions in them are taken from EN 10220. In the survey tables of different groups of tubes are as dimensional standards given numbers of EN valid for given group of tubes (eg. EN 10216-1).

# Hot rolled tubes - dimensions according to GOST 8732 and TU

Delivered as cold drawn
  Hot rolled pipes
 \*\* upon agreement

**Tolerances according to ASTM A530/A530M, ASTM A999/A999M (ASME SA)**

**Table 8**

Weight	Outside diameter	Wall thickness
All standards: NPS 12 and under -3,5 % +10 % over NPS 12 -5 % +10 %  upon agreement ASTM A999: With minimum wall thickness max +16 %	$1/8 - 1 1/2"$ (10,3–48,3 mm, incl.) $-1/32$ (0.031) $+1/64$ (0.015) $-0,8 +0,4$ mm <sup>3)</sup>	All standards: -12,5 % + limited by weight <sup>1)</sup>  upon agreement ASTM A999: Minimum wall thickness There shall be no variation under the specified T
	$1 1/2 - 4"$ (over 48,3–114,3 mm, incl.) $-1/32$ (0.031) $+1/32$ (0.031) $-0,8 +0,8$ mm	
	$4 - 8$ (over 114,3–219,1 mm, incl.) $-1/32$ (0.031) $+1/16$ (0.062) $-0,8 +1,6$ mm	

1) According ASTM A 530 is plus tolerance of T (latest edition):  
 NPS 1/8 – 2 1/2", all t/D ratios +20%  
 NPS 3 – 18", up to t/D 5 % +22,5 %  
 NPS 3 – 18", t/D over 5 % +15 %

2) Ovality for thin-wall pipes (T ≤ 3% D) under 1,5% of specified D  
 3) ASTM A335 dimension range 1/8 - 1 1/2 tolerances - 1/64 (0,4 mm)

**Dimensions and weight of hot rolled seamless tubes according to standard**

**Table 9**

A/SA-192; A/SA-210; A/SA556 in connection with A/SA-450 - min T, A/SA-209; A/SA-213; A/SA-334 in connection with A/SA-1016 - min T (upon agreement A/SA-335 in connection with A/SA-999 - min T)

Tube tolerances – see page 47 - table 10 and 11. For tubes are valid minimal wall thickness - so the tolerances of T are only plus.

The deliveries of hot finished tubes to these tolerances only upon agreement.

Hot finished tubes are usually delivered with average wall thickness (two sided tolerances of T).

Method of manufacture and delivery conditions – hot finished or cold drawn – depend on tube dimension or upon agreement (See table 5, page 40-41)

**Allowed outside diameter tolerances according to ASTM A450/A450M, ASTM A1016/A1016M (ASME SA) Table 10**

Outside diameter			
Hot finished	to 4" (101,6 mm)	-1/32 (0,8 mm)	+1/64 (0,4 mm)
	over 4"-7 1/2" (101,6-190,5 mm)	-3/64 (1,2 mm)	+1/64 (0,4 mm)
Cold finished	to 1" (25,4 mm)	-0.004 (0,1 mm)	+0.004 (0,1 mm)
	over 1"-1 1/2" (25,4-38,1 mm)	-0.006 (0,15 mm)	+0.006 (0,15 mm)
	over 1 1/2"-2" (38,1-50,8 mm)	-0.008 (0,2 mm)	+0.008 (0,2 mm)
	over 2"-2 1/2" (50,8-63,5 mm)	-0.010 (0,25 mm)	+0.010 (0,25 mm)
	over 2 1/2"-3" (63,5-76,2 mm)	-0.012 (0,3 mm)	+0.012 (0,3 mm)
	over 3"-4" (76,2-101,6 mm)	-0.015 (0,38 mm)	+0.015 (0,38 mm)
	over 4"-7 1/2" (101,6-190,5 mm)	-0.015 (0,38 mm)	+0.025 (0,64 mm)

Ovality for thin-wall tubes [T≤0,020in (0,5mm) / T≤2% D up to D=2in (50,8mm) / T≤3% D for D over 2in]:

Tubes with D≤1in (25,4mm) = 0,020in (0,5mm), tubes with D>1in = up to 2% of D (difference of maximum values)

**Allowed wall thickness tolerances according to ASTM A450/A450M, ASTM A1016/A1016M (ASME SA) Table 11**

Wall thickness				
Hot finished	to 0,095" (2,4 mm)	over 0,095" - 0,15"	0,15" - 0,18" (3,8 - 4,6 mm)	over 0,18" (4,6 mm)
	0 +40 %	(2,4 - 3,8 mm) 0 +35 %	0 +33 %	0 +28 %
Cold finished	With outside diameter			
	to 1 1/2" (38,1 mm)	0 +20%	over 1 1/2" (38,1 mm)	0 +22%

For tubes with D≥2in and T≥0,220in are permitted divergences from calculated average T ±10%.

**Dimensions and weight of steel tubes according to JIS standards (Tubes) Table 12**

Outside diameter [mm]	Wall thickness [mm]

## Tubes with internal ribs

Today, there is still prevailing use of tubes with smooth surface for the purposes of construction as well as reconstruction of energy type facilities even despite that fact that tubes with surface structure (tubes with interior ribbing) positively influence performance of energy type facilities.

Tubes with interior ribbing are intended for high-performance steam generators, for high-pressure boilers and are also used in the area of burners and other equipments.

Interior ribs cause separation of steam and liquid as a result of centrifugal power, whereby the fluid phase (water) is forced to the tube wall, where it is stored longer as a water film. Using this method prevents occurrence of boiling on the interior tube wall which prevents exchange of heat and may also be the cause of occurrence of critical zones of commencing distortion of steel tube. Admissible share of water steam while retaining the heat flow and using ribbed tubes thus increases in the interval of 20 – 40 %, when using smooth surface tubes to 70 – 90 %.

That phenomenon results in increasing the contact surface area between the liquid part and tube wall, which brings about the following benefits:

- Improves the level of heat transfer even with a higher share of steam,
- A very good level of heat transfer is retained also at lower medium flow,
- Temperature of tube walls is reduced and so is the risk of distortion of tubes,
- It also prepares the room for improvement of heat transfer by a suitable optimization of ribs geometry.

On the other hand, for the purpose of reconstruction of older energy type facilities, it is possible to apply ribbed tubes to increase the output of the facility while retaining facility's dimensions. Last but not least, ribs have an interesting attenuating effect, which prevents from sedimentation of solid particles present in the medium, which contributes to limitation of the occurrence of corrosion processes and it has a favorable impact on the increase of tube lifespan. That is a clear representation of general economic and ecological contribution of such tubes

The heat transmission degree can be optimized by a suitable choice of rib geometry, depending on existing operating conditions of the equipment (boiler or heat exchanger). Each tube is tested by ultrasound or eddy current in order to ensure required quality features.

Tubes are supplied in quality grades in accordance with EN 10216, JIS G3461 – 3462, ASTM, ASME A/SA 192, 209 210 A 213 and other corresponding standards. Below you can find a breakdown of size assortment of tubes with interior ribbing supplied by Železiarne Podbrezová a.s. as it is shown in table 17 and 18.:

Parameters of tubes with internal ribs

Table 17

Symbol	Parameter	Range	
		[mm]	[inch]
D	Outside diameter	18–72	.750–3.000
T	Tube wall thickness	1–6,5	.047–.250
	Number of ribs	6–8	
h	Rib height	0,3–1,0	.016–.047
f	Rib width at the top (cross section)	3–8	.125–.313
β	Rib side angle	30°	
r	Rib radius	0,1–0,15	.004–.006
a	Rib pitch angle	25°–35°	
	Rib pitch length (360°)	depending on D	
	Distance of rib centers in the longitudinal direction	upon agreement	
s	Rib width at the top (longitudinal section)	upon agreement	
	Width of the distance between ribs at the top (longitudinal section)	upon agreement	
	Inside tube circumference	upon agreement	
	Transversal tube diameter	upon agreement	
	Tube weight	kg/m	lb/ft
	Tube length	upon agreement

\* HF production facilities to 12,7 m + 30 mm (50 mm), over 12,7 m + 100 mm

- The tubes for threading according to standard EN 10255 are preferential delivered as hot finished
- For technological reasons and for reasons to achieve the required dimensional tolerances are as cold drawn and normalized delivered by agreement following tubes:
  - all dimensions with D 10,2 / 13,5 / 17,2 mm
  - at type L and L1 also D 76,1/ 88,9 / 101,6 – only at type L / 114,3 mm
  - all dimensions at type L 2

### List of dimensional standards and technical delivery conditions standards

- EN 10224 Steel pipes, joints and fittings for the conveyance of aqueous liquids including potable water.
- EN 10255 Non-alloy steel tubes suitable for welding or threading.
- DIN 2440 Steel tubes; medium-weight suitable for screwing.
- DIN 2441 Steel tubes; heavy-weight suitable for screwing.
- DIN 2442 Threaded tubes made to quality specifications.
- DIN 2460 Steel tubes for waterworks services.
- NFA 49-115 Hot finished seamless tubes suitable for threading. Dimensions. TDC.
- UNI 6363 Seamless and welded steel tubes for waterworks services.
- UNI 8863 Seamless non-alloy steel tubes suitable for threading in accordance with UNI ISO 7/1.
- BS 1387 Screwed and socketed steel tubes.
- STN 425710 Steel tubes suitable for threading. Medium.
- STN 425711 Steel tubes suitable for threading. Heavy.
- GOST 3262 Water and gas supply steel pipes.
- ASTM A53 Pipe, steel, black and hot-dipped, zinc-coated, welded and seamless. TDC.
- ASTM A795 Black and hot-dipped zinc-coated (galvanized) welded and seamless steel pipe for fire protection use.
- PN-H 74200 Steel tubes for gas list threading.
- JIS G 3452 Carbon steel pipes for ordinary piping (Steel SGP).
- ISO 65 Tubes for screwing

(Fluid-, Water Transportation and House Instalation)

#### List of dimensional standards and technical delivery conditions standards (Product specification PSL1 according to API)

API Spec5L	Specification for line pipe.	EN ISO 3183	Steel tubes for pipeline transportation system
DIN 2448	Plain end seamless steel tubes. Dimensions.	Annex M – PSL 2	Pipe ordered for European onshore natural gas transmission pipelines
DIN 2460	Steel tubes for waterworks services.	UNI 7088	Unalloyed steel seamless tubes
DIN 2470-1	Steel gas pipelines - pressure up to 16 bar.		- Plain gas tubes for high pressure.
DIN 2470-2	Steel gas pipelines - pressure exceeding 16 bar.		
DIN 17172	Steel pipes for pipelines for the transport of combustible fluids and gases.		

#### Steel designation according to EN ISO 3183 and API Spec 5L:

- PSL 1 – L210 or A  
L – steel for pipeline  
210 – minimum yield strength in N/mm<sup>2</sup>
- PSL 2 – L245R or BR, L245N or BN, L245Q or BQ, L245M or BM  
R – As-rolled  
N – Normalising formed or normalised  
Q – quenched and tempered  
M – thermomechanically formed (only welded pipe)
- PSL 2 pipe ordered for sour service (Annex H)  
L245NS or BNS, L245QS or BQS, L245MS or BMS
- PSL 2 pipe ordered for offshore service (Annex J)  
L245NO or BNO, L245QO or BQO, L245MO or BMO
- PSL 2 pipe ordered for European onshore natural gas transmission pipelines (Annex M)  
L245NE or BNE, L245QE or BQE, L245ME or BME

NSD – Nominal Size Designation

**Notes:** Dimensions 1/8, 1/4 and 3/8 are delivered as cold drawn. The table is valid for tubes for threading and plain end tubes. Values (SD) in brackets were valid until 1995. Since 2000 in the range 10.3 – 48.3 mm Nominal Size Designation and outside diameter D are equal. From 60,3 mm numbers without brackets are valid for Nominal Size Designations and Ds. (under the line) Pipe with T of STD and XS are also designed for threading. See also table 7 page 44 and note at page 58.

## Casing and tubing - tube for oils

The tubes are used in oil and gas industry.

### List of standards for casing and tubing

Standard	Dimensional standard	Dimensions	TDC	Steel grade
API	API Spec 5CT	Tab 22 Page 61	API 5CT	H40, J55, K55, N80

### Dimensional standard and technical delivery condition standard

API 5CT Specification for casing and tubing (ISO 11960:2004)

#### Dimensions and tolerances

Dimensions are given in Table 22. Tubes are delivered mainly as hot rolled.

#### Tube lengths (Tubing)

Group 1: 6,10–7,32 m (20–24 ft)  
 Group 2: 8,53–9,75 m (28–32 ft)  
 Group 3: 11,58–12,80 m (38–42 ft)

#### Tube lengths Casing

Group 1: 4,88–7,62 m (16–25 ft)  
 Group 2: 7,62–10,36 m (25–34 ft)  
 Group 3: 10,36–14,64 m (34–48 ft)

#### Straightness

Tubes are visually straight.

#### Tube ends

Plain tube ends without threading and flanges.

#### Steel grade

Steel grades are given in survey table.

#### Final supply conditions and surface condition

Hot finished tubes are not heat treated. Surface of tubes corresponded to the method of tube manufacturing. Normalization (N) only upon agreement.

#### Pipe and bundle marking

- stamp marking
- stencil marking (Ink Jet)
- colour bands

Bundles are marked with one or more metal tags with required information.

#### Surface protection

The pipes are supplied either uncoated or with manufacturer's standard mill coating. Upon request the tube ends could be plugged with plastic caps.

#### Packaging

Pipes are packed in round bundles with weight 1000–3500 kg. Each bundle is bounded with 4 steel strips.

#### Testing

Tubes are tested according to requirements of standard API 5CT, eventually additional agreed tests.

#### Certified test report

API Spec 5CT  
 DIN 50049 – 3.1.B  
 EN 10204 – 3.1

### Steels grades, chemical composition and mechanical properties (Group 1 and Type 1 according API Spec 5CT)

Standards	Steel	Chemical composition [%]										Mechanical properties					
		C	Si	Mn	Pmax	Smax	Cr	Ni	Mo	Cu	Other	Re min MPa	Re min ksi	Rm min MPa	Rm max MPa	A5 min ksi	A5 min %
API Spec5CT																	
	Grade H40	–	–	–	0,030	0,030							276	40	414		60
	Grade J55	–	–	–	0,030	0,030							379	55	517		75
	Grade K55	–	–	–	0,030	0,030							379	55	655		95
	Grade N80-1				0,030	0,030							552	80	689		100

Tubing is delivered according of requirements PSL 1. Level PSL 2 and PSL 3 (Annex H of API 5CT) according agreement.

### Designation of steels for precision tubes according to EN:

- machining steel tubes:
  - steel E355 + AR, E 355 + N
    - E – steel for machine part
    - 355 – minimum yield strength
    - + AR – heat treatment not applied, + N – normalized or normalising formed
  - steel 20MnV6
    - steel designated by chemical composition – guaranteed mean C content 0,20% guaranteed content of Mn and V
    - + AR – heat treatment not applied, + N – normalized or normalising formed
- steels for machine parts
  - steels for working without next heat treatment
    - non-alloy steel E 235, E275, E315, E355
    - condition +AR or +N
  - steels with specified impact properties (fine grain) E275K2, E355K2
    - K2 – minimum average absorbed energy 40J (K) at a test temperature of –20 °C
  - steels for heat and chemical-heat treatment of parts after working
    - steel C22E
      - C – steel with C content 0,22%, E – assignment on controlled mean of S and P
    - steel 38Mn6
      - guaranteed mean C content and guaranteed Mn content

ASTM	A519				See page 18			
JIS	G3445				See page 18			

### Notes:

1. Tolerances of outside or inside diameter are not given like % of diameter as with rolled tubes, but they are usually a part of dimensional tables. Values in Table 25 are taken from EN 10305-1. Exact tolerance values of tubes according to other standards are given in appropriate standards.
2. Tubes shall be ordered: D x d, D x T, d x T (d = inside diameter). The tolerances are valid for these two ordered values.
3. Tubes for mechanical and pressure purposes (page 16–47) upon agreement can be delivered as precision according to dimensional standards for precision tubes.
4. Precision tubes can be delivered also upon bilaterally agreed TDC and technical specifications.
5. Ovality and eccentricity see page 4.

### List of dimensional standards and technical delivery conditions standards

STN 42 0260	ČSN 42 0260 Cold drawn precision seamless steel tubes from steel class 10 to 16.
STN 42 6710	ČSN 42 6710 Cold drawn seamless tubes with normal tolerances. Dimensions.
STN 42 6711	ČSN 42 6711 Precision seamless steel tubes. Dimensions.
STN 42 6712	ČSN 42 6712 Precision seamless steel tubes with increased accuracy. Dimensions.
GOST 8733	Seamless steel tubes cold and hot deformed. TDC.
GOST 8734	Seamless steel tubes cold deformed. Dimensions.
GOST 12132	Electrowelded and seamless steel tubes for automotive and bicycle industries.
GOST 21729	Cold deformed and hot deformed structural carbon and alloyed steel tubes.
PN-H 74220	Seamless steel cold drawn or rolled tubes for general purposes.
PN-H 74240	Seamless cold drawn precision steel tubes.
ASTM A519	Seamless carbon and alloy steel mechanical tubing.
JIS G 3445	Carbon steel tubes for machine structural purposes.
GOST 9267	Precision seamless steel tubes. Dimensions.

Exact value of tolerances depends on:

- the method of ordering of precision tubes (Dxd, DxT, dxT),
- tube delivery condition (drawn hard or heat treated),
- optional tolerance requirements.

Specific figures are given in appropriate standards (generally D < ±0,5 %, T = ±10 %).

**Allowed weight tolerances according to ASTM A450 and ASTM A1016 standards Table 24**

Seamless hot finished	Seamless cold finished	
	D ≤ 1 1/2" (38,1 mm)	D > 1 1/2" (38,1 mm)
0 +16 %	0 +12 %	0 +13 %

**Dimensions and tolerances of drawn precisious seamless steel tubes according to EN, DIN, UNI, NFA, PN-H standards**

0,025 < T/D											0,025 < T/D < 0,05							0,005 < T/D							

Other dimensions (up to diameter 162) and tolerances upon agreement.

Tolerances D are valid for conditions BK and BKW according to DIN standards and for conditions +C a +LC according to EN standards. At heat treated tubes (conditions NBK, GBK, BKS according to DIN standards and conditions +N, +A, +SR according to EN standards) can be tolerances enlarged, as is shown in the table on page 70.

This is valid also in other standards.

**Notes:**

1. Weights are valid for average (nominal) wall thickness. See also notes on page 46
2. Other dimensions upon agreement. Wall thickness according BWG and SWG (see table 55 on page 117) within range 25 – 2/0 (BWG) and 25 – 3/0 (SWG).

**Allowed wall thickness tolerances according to ASTM A450/A450M a ASTM A1016 standards**

**Table 31**

Wall thickness				
Hot formed	do 0,095" (2,4 mm)	0,095"–0,15" (2,4–3,8 mm)	0,15"–0,18" (3,8–4,6 mm)	nad 0,18" (4,6 mm)
	0 +40%	0 +35%	0 +33%	0 +28%
Cold drawn	With outside diameter			
	do 1 1/2" (38,1 mm)	0 +20%	above 1 1/2" (38,1 mm)	0 +22%

## Steel tubes for automotive industry

Production programm – see Tables 23–31 at pages 68–72.

### Production process

Precision seamless steel tubes - cold finished

Standards	Steel
EN 10305 Part1	E215, E235, E355 (others upon agreement)
ASTM A519	Table 1 and 2 of Standard
DIN 2391	St 35, St 45, St 52
BS 6323 Part 4	CFS 3, CFS 4, CFS 5, CFS 8
NF A49-310	TU 37-b, TU 52-b, TU 20MV6

Deliveries according to TDC of customer upon agreement.

Steel grades chemical composition and mechanical properties can be found in tables in the chapter of Precision standard steel tubes.

### List of dimensional standards and technical delivery conditions standards

ASTM A519	Seamless carbon and alloy steel mechanical tubing.
DIN 2391	Seamless precision steel tubes.
BS 6323-4	Specification for seamless and welded steel tubes for automobile, mechanical and general engineering purposes. Part 4: Specific requirements for cold finished seamless steel tubes.
NF A49-310	Steel tubes - Seamless precision tubes for mechanical application.

### Lengths

- random 3–9 m
- exact cut lengths
- cutting of tubes (tubes can be also worked by other technologies – see page 86)

### Steel grade

Steel is shown in the table of chemical composition and mechanical properties.

### Delivery conditions (see page 104)

- +C (BK) – cold finished/hard (without heat treatment)
- +LC (BKW) – cold finished/soft
- +SR (BKS) – cold drawn and stress relieve annealed
- +N (NBK) – normalized

### Testing

Tubes are tested according to the production standards. Eddy current test upon request according to EN ISO 10893-1,-2.

### Marking

According to the production standards or, on request, colour stencilling along whole tube length according to customer specification.

### Surface protection

Without protection or oiled.

### Packaging

In round bundles of maximum weight 2 tons each, fastened with steel strips.

### Certified test report

According to EN10204 -2.2, 3.1., 3.2 (See also page 7).

## Injection tubes

Tubes for injection system of Diesel engines are produced upon agreement. (ČSN 42 6718, DIN 73000, ISO 8353-1, steel grades 12015, St 30Al, St 30Si).

## Tubes, galvanized with PVC coating

For the plastic coating of the tubes the following assortment range is used:  
Precision seamless steel galvanized HPL pipes (page 79).  
Grades: E 235+N, according to DIN 10 305-1 or 4, other grades are possible by arrangement.

### Dimensions of pipes with PVC coating

Tubes are supplied in the dimension 6.0 x 1.0 mm, other dimensions are possible by arrangement. Lengths are 6 000 mm and are supplied in bundles or in a flat condition.

### Marking tubes with PVC coating

Each meter of a tube is marked as follows, font size 2 mm:  
CUSTOMER - 6 x 1 SEAMLESS CNG ISO 15500 GASTEC approval 122779/1 110R-000130H1

### Packaging of the tubes with PVC coating

Bundles of tubes diameter from 200 to 300 mm, are packed in cardboard boxes and shipped on a pallet, straight tubes are tied in bundles with steel tape, underlined with paper or plastic.

### Testing of tubes with PVC coating

The tubes are eddy current tested according to EN 10246-3 standard.

### Properties of the PVC coating

This is the material free of lead (Pb) and cadmium (Cd), the surface color is white, matt. Operating temperature between -55 and 135 ° C, in case of fire coating is flame-retardant. The protective layer PVC does not corrode and is well resistant to chemicals.

Tubes are designed for gas distribution in CNG-powered cars. Distribution of gas in vehicles with CNG consists of high and low pressure parts. High pressure parts connect the pressure vessel portion in which the gas pressure reaches 22 MPa with filling connection and pressure regulator located in the engine compartment.

## Special tubular sections

Special sections for power transmissions for the agricultural industry are manufactured in various sections (lemon, star, triangular) in accordance with international and European standards.

Special tubes with cylindrical or octagonal outside sections with rifling inside. The inside rifling is produced directly by lamination during the cold drawing. These tubes are manufactured in carbon steel or alloyed steel grades.

## Tubes for hydraulic and pneumatic cylinders

### Precision tubes for mechanical treatment – HPZ

---

#### Dimensions

Dimensions of HPZ tubes are given in Table 32/Page 76.

#### Tolerances

- outside diameter according to standards DIN 2391-1, EN 10305-1, ČSN/STN 42 6712
- inside diameter – Table 32
- wall thickness  $\pm 7,5\%$
- eccentricity is included in the tolerances of wall thickness

#### Lengths

- random lengths 3–6 m
- fixed lengths max. 6 m

#### Straightness

1 mm/m (1 : 1 000) – measured on outside surface.

#### Tube ends

Plain, upon request ends could be plugged with plastic caps.

#### Steel grade

- 11 523 according to STN, ČSN
- St 52 according to DIN 2391, St 52-3 according to DIN 17100
- E 355 according to EN 10305-1
- 20 Mn V 6 according to EN 10294-1
- another steel upon agreement

#### Delivery condition

BKS (+SR) – cold finished / stress relieve annealed. Other conditions upon agreement.

#### Outside diameter

Smooth after cold drawing (DIN 2391).

#### Testing

- cast analysis
- tensile test
- visual test
- dimensional test
- NDT (eddy current test)
- other tests upon agreement

#### Marking

Colour stencilling along whole tube length:

- producer's logo
- size (D – d)
- steel
- heat No.
- standard number (or according to customer's specification)

#### Surface protection

Tubes are oiled.

#### Packaging

Tubes are packed in round or hexagonal bundles with weight max. 2000 kg, fastened with steel strips.

#### Certified test report

According to EN 10204 - 3.1.

**Dimensions and weight of HPZ tubes for mechanical machining**
**Table 32**

Inside diameter [mm]	Tolerance of inside diameter [mm]	D x T [mm]	Weight [kg/m]
<b>40</b>	-0,20 / -0,40	50 x 5	5,55

	127 x 6		17,90	
	130 x 7,5		22,66	

Upon agreement also tubes with inside diameter 30 mm with T 5 / 6 / 7,5 / 10 mm. Tolerances d according to agreement. The tube weight according to the formula (see page 4).

**Chemical composition and mechanical properties of steel for HPZ tubes  
Delivery condition BKS (+SR)**

Steel	C max %	Mn max %	Si max %	P max %	S max %	Al min %	R <sub>eH</sub> (N/mm <sup>2</sup> )	R <sub>m</sub> (N/mm <sup>2</sup> )	A %
<b>St 52</b>	0,22	1,60	0,55	0,025	0,025	0,020	min. 420	min. 580	min. 10
<b>E 355</b>	0,22	1,60	0,55	0,025	0,025	0,020	min. 450	min. 580	min. 10

Chemical composition and mechanical properties of steel 11 523 and St 52-3 are approximately identical to steel grades in table. Steel 20 Mn V 6 includes V (0,08 - 0,15%), or a part of V is possible to replace with Nb providing that Vmin is 0,05% and contents V + Nb is under 0,15%.

## Tubes for hydraulic and pneumatic cylinders - tubes ready to use

### Precision hydraulic tubes – HP – „ready to use“

---

#### Dimensions

Dimensions and HP tube weight are given in Table 33/78.

#### Tolerances

- outside diameter according to standards DIN 2391-1, EN 10305-1, ČSN/STN 42 6712
- inside diameter – ISO H8, H9 – Table 33
- wall thickness  $\pm 7,5\%$  or  $\pm 10\%$
- eccentricity is included in the tolerances of wall thickness

#### Lengths

- random lengths 2 – 6 m
- fixed lengths max. 6 m

#### Straightness

1 mm / m (1 : 1000) – measured on outside surface.

#### Tube ends

Plain, upon request ends could be plugged with plastic caps.

#### Steel grade

- 11 523 according to STN, ČSN
- St 52 (1.0580) according to DIN 2391, St 52-3 (1.0570) according to DIN 17100
- E 355 (1.0580) according to EN 10305-1
- 20 Mn V 6 according to EN 10294-1 (see pages 21, 114, 115)
- another steel upon agreement

#### Delivery condition

BKS (+SR) - cold finished / stress relieve annealed. Other upon agreement (NBK, +N, BK, +C).

#### Outside surface

Smooth after cold drawing (DIN 2391).

#### Inside surface

Roughness  $R_a \leq 0,4 \mu\text{m}$ ,  $R_z \leq 1,5 \mu\text{m}$ .

#### Testing

- cast analysis
- tensile test
- visual test
- dimensional test
- NDT (eddy current test) according to SEP 1925, EN 10246-1 or another agreed method
- other tests upon agreement

#### Marking

Colour stencilling along whole tube length:

- producer's logo
- size (inside diameter x wall thickness)
- steel
- heat No.
- standard number (or according to customer's specification)
- bundle with label with supplementary informations

#### Surface protection

Tubes are oiled.

#### Packaging

Tubes are packed in round or hexagonal bundles with weight max. 2 000 kg, fastened with steel strips.

#### Certified test report

According to EN 10204 - 3.1.

**Dimensions, tolerances and weight of HP tubes**

**Table 33**

Inside diameter [mm]	Tolerance of inside diameter [mm]		D x T [mm]	Weight [kg/m]	Maximum length [mm]
	H8	H9			
40	0 / +0,039	0 / +0,062	48 x 4	4,34	3 000

			130 x 10	29,59	

The diameters 80 x 10 mm (17,26 kg/m) and 126 x 8 mm (23,28kg/m) upon agreement

**Chemical composition and mechanical properties of steel for HP tubes**  
**Delivery condition BKS (+SR)**

Steel	C max %	Mn max %	Si max %	P max %	S max %	Al min %	R <sub>eH</sub> (N/mm <sup>2</sup> )	R <sub>m</sub> (N/mm <sup>2</sup> )	A %
<b>St 52</b>	0,22	1,60	0,55	0,025	0,025	0,020	min. 420	min. 580	min. 10
<b>E 355</b>	0,22	1,60	0,55	0,025	0,025	0,020	min. 450	min. 580	min. 10

Chemical composition and mechanical properties of steel 11 523 and St 52-3 are approximately identical to steel grades in table. Steel 20 Mn V 6 includes V (0,08 - 0,15%), or a part of V is possible to replace with Nb providing that V<sub>min</sub> is 0,05% and contents V + Nb is under 0,15%.

## Tubes for hydraulic and pneumatic pressure circuits and galvanized tubes - HPL

Tubes are used in hydraulic and pneumatic power systems.

### A list of standards according to which HPL tubes are delivered:

Standards	Dimensional standards	Dimensions	Technical delivery conditions	Steel grade

### List of dimensional standards and technical delivery conditions standards

STN 42 0260	ČSN 42 0260 Cold drawn precision seamless steel tubes from steel class 10 to 16. TDC.
STN 42 6711	ČSN 42 6711 Precision seamless steel tubes. Dimensions.
STN 42 6712	ČSN 42 6712 Precision seamless steel tubes with increased accuracy. Dimensions.
ASTM A450	General requirements for carbon, ferritic alloy and austenitic alloy steel tubes.
ASTM A822	Seamless cold drawn carbon steel tubing for hydraulic system service.
DIN 1630	Seamless circular tubes of non-alloy steel with very high quality requirements. TDC.
DIN 2391	Seamless precision steel tubes.
DIN 2413/1	Steel tubes, calculation of wall thickness of steel tubes subjected to internal pressure.
DIN 2445	Seamless steel tubes for dynamic loads. Part 1: Hot finished tubes in fluid systems, PN 100 to PN 500. Part 2: Steel tubes for precision application in fluid systems, PN 100 to PN 500. Supplement: Design rules.
BS 7416	Precision finished seamless cold drawn low carbon steel tubes for use in hydraulic fluid power systems.
UNI 7945	Plain end seamless precision steel tubes.
NFA 49-330	Seamless cold drawn tubes for hydraulic and pneumatic power systems.
EN 10305-4	Steel tubes for precision applications. Part 4: Seamless cold drawn tubes for hydraulic and pneumatic power systems.
JOHS-102	Carbon steel precision tubes for hydraulic line service.
PN-H 74245	Cold drawn or rolled seamless steel tubes of specified application.

## Dimensions

Dimensions are given in Table 35.

## Tolerances

According to standards, special tolerances could be agreed on request.

## Lengths

- exact lengths 6 000 mm (tolerances - standard lengths 0+50 mm, exact lengths 0+10 mm)
- on request other fixed lengths in the range 3 000 – 9 000 mm

## Straightness

3 mm/m, totally max 0,0015% of tube length.

## Tube ends

Plain ends, plugged with plastic caps.

## Steel grade

Steel is shown in the table of chemical composition and mechanical properties (see page 81).

## Delivery condition

Normalized:

.1 – STN, ČSN NBK - DIN

+N – EN

N – ASTM

Roughness (D and d), d over 15 mm,  $R_a \leq 4 \mu\text{m}$ .

## Micropurity (data upon agreement)

According to NFA 04-106 or ASTM E45 (ranking JK) max. A4 - B2 - C2 - D2. Also according to ISO 4967 or EN 10 247 upon agreement. A - sulphide, B - Alumina, C - Silicate, D - Oxides, DS - Oxides)

## Grain size (data upon agreement)

According to EN ISO 643 - 5 and finer.

## Testing

Non specific inspection or specific inspection. In both cases leak tightness test will be carried out in accordance with EN 10246-1 (electromagnetic test). Other tests according to standards.

## Marking

Each tube shall be marked with Ink-Jet system along whole tube length according to standard or customer's specification. The bundle of tubes shall be marked with a label attached to the bundle.

## Surface protection

- oiled
- phosphated and oiled
- outside surface of tube as chromating – upon agreement only - see page 81

## Packaging

Tubes are packed in round or hexagonal bundles of maximum 2000 kg each, fastened with steel strips. On request – paper below the stripes and plastic bags at the bundle ends.

## Certified test report

According to DIN 50049 and EN 10204:2004

- non specific inspection - 2.2
- specific inspection - 3.1.B., according to EN 3.1
- upon agreement - 3.1.C., according to EN 2.2 (See also page 7)

Pressure chart for hydraulic tubes – see tables 36 (A,B,C,D) page 84 - 87. (Calculation according to DIN 2413)

## Protection of the outer surface of the HPL tubes

### A. GALVANIC PROTECTION OF TUBE SURFACE

The outer surface of HPL tubes (or other types of tubes) can be protected by galvanizing. Coatings in addition to corrosion protection also improve the aesthetic appearance of the product.

The coating usually consists of several layers.

**The first (lower) layer** is galvanic excluded zinc (Zn) or zinc alloy. Layer thickness is 5 - 30 µm.

**The second (eventually middle) layer** consists chromium (Cr). In the past were used Cr 6+ salts, which is toxic. According to the valence of chromium process is called chromating. Using this type of Cr has been forbidden – European Community Directive Nr. 2000/53/EC ( ELV Directive – End of Life Vehicles) and Directive Nr. 2002/95/EC – so-called RoHS conformity – The **Restriction** of use of certain **Hazardous Substances** - Pb, Hg, Cr6+, Cd, PBB-polybrominated biphenyls, PBDE-polybrominated diphenylether. This directive restricts the use of hazardous substances in electrical engineering. Procedures, which are not used banned substances are comply with the Directive. Currently used in the process the Cr3+ salts and process is called chromiting or passivation.

**Last (top) layer** increases the resistance and stability of surface and consists of organic matter containing Si. This process is called impregnation or sealing. This layer may not be applied.

Depending on changes of used procedures (Cr6+ was replaced with Cr3+) has also changed the applicable standards. In the past were valid the standards DIN 50961 and EN 12 229. The Standard EN ISO 2081 has been in use since year 2008. Not even the procedures according to ISO do not guarantee the conformity with requirements of RoHS.

Now is valid new EN ISO 2081, which defines the parameters of the surfaces and their marking. In practice are used two types of surfaces:

- **transparent passivation (thin layer)** is colorless to colored iridescent. For marking is used code **A**.
- **iridescent passivation (thick layer)** is colored iridescent. For marking is used code **C**.
- surface without sealing has not any code, surface with sealing has the code T2
- required thickness of Zn layer in µm (range 5 – 30 µm)
- example for marking of the surface: Fe/Zn8/C means: basic material – steel, layer of Zn min. 8 µm, iridescent passivation, without sealing.

**Dimensional table of Železiarne Podbrezová and Transmesa is in Table 34, page 82.**

### B. PROTECTION OF THE SURFACE OF TUBES WITH PLASTIC LAYER – WITH POLYOLEFIN.

The layer of polyolefin protects the outer surface. It provides mechanical protection, anticorrosion, against chemicals, thermal - insulation and is used for decorative purposes.

Types of tubes coated with polyolefin:

1. HPL tubes non galvanized
2. HPL tubes galvanized with Zn layer 8 – 12 µm
  - iridescent passivation – Fe/Zn8/C
3. Other types of tubes in the size range:

Wall thickness	Outside diameter
1	8 - 22
1,5	8 - 22
2	8 - 22
2,5	14 - 22
3	18 - 22

L = 4 000 – 6 000 mm.

Material – thin-walled, halogen-free polyolefin according to EN 60684, operating temperature - 40 °C until +105°C (short +150°C), tensile strength min. 10 N/mm<sup>2</sup>, elongation min. 300 %, nonflammable, resistant to mildew, oil and chemicals.

Theoretical allowed operating pressure without test certificate [MPa] is calculated according to DIN 2413-93 by 20°C (1 MPa = 10 bar)

The data are informative. The real expected pressures have to fulfill the construction requirements of the device.

Theoretical allowed operating pressure without test certificate [MPa] is calculated according to DIN 2413-93 by 20°C (1 MPa = 10 bar)

The data are informative. The real expected pressures have to fulfill the construction requirements of the device.

## Tubes for bearing production

### Dimensions of precision tubes for manufacturing of bearing:

Table 37

Outside diameter [mm]	Wall thickness [mm]
22–25	3–4,1
25,01–29	3–5
29,01–32	3–6,7
32,01–40	3–7,8
40,01–70	3–8

#### Tolerances

##### outside diameter

D < 50 mm:	0 + 0,15 mm
D ≥ 50 mm:	0 + 0,25 mm

##### wall thickness

± 7,5 % (upon agreement ± 5 %)

#### Lengths

3 000 ± 500 mm

#### Straightness

1 mm/1000 mm, max 2,5 mm/3000 mm

#### Steel grade

DIN 17 230 – 100Cr6 (or 14 109 according STN, ČSN).

C	Mn	Si	P	S	Cr	Ni	Cu	Sn
0,90 1,10	0,30 0,50	0,15 0,30	max 0,017	max 0,015	1,30 1,65	max 0,10	max 0,15	max 0,010

#### Delivery condition (heat treatment)

GKZ + K + G – annealed for globular carbide + cold finished + soft annealed.

#### Hardness

After soft annealing is 174 – 220 HB. Dispersion of hardness along the tube length max 15 HB. Hardness by quenching test is min 61 HRC.

#### Surface condition

The tubes are delivered with surface after soft annealing. Max depth of defects is 0,25 mm inclusive decarbonizing.

#### Microstructure

Tested according to SEP 1520:

- size of carbide 2.1 – 2.3
- lamellar pearlite 3.0
- carbide net 5.2
- carbide line spacing max 6.3 – continuous  
max 7.3 – released

#### Micropurity

Tested according to DIN 50602. Total value (oxide + sulphide) K3 ≤ 10.

#### Demagnetizing

Residual magnetism max 10 Oe.

#### Tube ends

Plain square cut ends, one end bevelled 0,5–4 mm x 45°.

#### Testing

Testing according to DIN 17 230. NDT upon agreement according to EN 10246-3 E2H and EN 10246-7 U2/B and test of material identification of alloy steel.

#### Marking

Bundles are marked with label.

#### Surface protection

Oiled.

#### Packaging

Tubes are packed in bundles of weight of 1 000–3 000 kg.

#### Certified test report

According to DIN 50049 - EN 10204 - 3.1.B. (3.1).

#### Notes:

1. Possible to deliver also in condition Hot finished.
2. Deliveries according standard EN ISO 683-17 too:
  - Dimensions and tolerances upon agreement.
  - Surface condition and designation:
    - Hot formed – without or HW
    - Cold drawn – CD
  - Heat treatment and delivery condition:
    - Without heat treatment – without or +U
    - Heat treatment for spheroidization and cold drawn +AC+C
    - Heat treatment for spheroidization +AC

## Precision tubes, delivered in coils

Precision steel tubes, delivered in coils, find its application in many fields of industry for example as injection tubes for diesel engines, tubes for distribution of oil or fuel. Tubes in coils are delivered in accordance with EN 10305-1 (EN 10305-2) and DIN 2391 (DIN 2393).

### Dimensions of tubes in coils

Tubes are delivered in a range, outside diameter between 4 and 18 mm, wall thickness between 0.45 and 2.5 mm. Other dimensions may be delivered upon agreement. For application to injection equipments of combustion engines (diesel) following dimensions of tubes may be delivered: 6x1, 8; 6x2,1; 6x2,125; 6x2,2; 6x2,25 mm. Diameter of the coil alone is between 750 and 1200 mm depending upon the outside diameter of the tubes. Depending upon the outside diameter of the tube, inside in the bundle there is a tube with a length between 60 to 560 m (max coil weight is 50 kg).

### The types of tubes' steel in coils

E 215, E 235, E 255, E 355, C 15, other grades upon agreement. Injection tubes are produced from the St 30Al steel a SAE 1010.

### Tubes in bundles – delivery condition

+C (BK)	Cold drawn / hard. After the last cold forming, thermally not processed.
+N (NBK)	Normalized. After the last cold drawing the tubes are normalized in protective atmosphere.
+LC +A +SR	

### Tolerances

Tube tolerances are in accordance with EN 10305-1, see table 25 page 69. D tolerances for product range is  $\pm 0,08$  mm, d tolerances are  $\pm 0,08$  mm or  $\pm 0,15$  mm depends on D and wall thickness tolerances are  $\pm 10$  %. The reduced tolerances have to be agreed.

### Surface conditions

Surface fulfilled requirements of EN 10305 – 1.  $R_a \leq 3\mu\text{m}$ .

### Packaging of the tubes in coils

Bundles of tubes are packaged into paper boxes weighing between 100 to 120 kilograms which are subsequently stored on wooden pallets or into metal containers weighing up to 400 kilograms.

### Surface protection and marking

Tubes in coils are marked with labels. A label contains all information requested by the standards. The tube outside surface is oiled. The tube inside surface is oiled in delivery condition +C or +LC. There is not tube surface protection in delivery conditions +N, +SR and +A.

### Testing of the tubes in coils

Tubes are tested by eddy current according to EN 10246-3.

### Certificates for tubes in coils

Certificates are issued according to EN 10204/3.1.

## Cut and bent tubes

Specially designed tube semi-finished products, tailored to customer's needs are available upon request. Cold drawn precise tubes are machined, but when requested, hot finished tubes are furnished as various forms of semi finished products.

### Products

- Tube cut in short exact lengths by:
  - sawing
  - shearing
  - rotary cut-off head with slides
- Tube with bevelled ends
- Tube bending

Dimensions of tube bends

Table 38

	Bend angle Rm											
	20	25	32	40	50	60	80	100	125	160	200	250
D = 10 t ≥ 1												
D = 12 t ≥ 1												
D = 14 t ≥ 1												
D = 15 t ≥ 1												
D = 16 t ≥ 1												
D = 18 t ≥ 1												
D = 20 t ≥ 1												
D = 22 t ≥ 1												
D = 24 t ≥ 1												
D = 25 t ≥ 1												
D = 28 t ≥ 1												
D = 30 t ≥ 1,5												
D = 32 t ≥ 1,5												
D = 35 t ≥ 1,5												
D = 38 t ≥ 1,5												
D = 40 t ≥ 1,5												
D = 42 t ≥ 1,5												

$t = D/20$   
 $R_i = 2D$

$t = D/30$   
 $R_i = 3D$

$t = D/50$   
 $R_i = 4,5D$

It is possible to bend the tubes in three planes without destroying the tube at the bend point (see table) by CNC tube bender. Bend parameters:

- max. size of bent tube – 42 x 2,5 mm
- bend radius – 12–260 mm
- max. bend angle – 187 °
- tolerance on bend angle – ±0,1°
- tube length under the final bend – max 3 000 mm
- tolerance of length – ±0,1 mm

### Packaging

Semi-finished products are delivered according to customer specifications in mettalic box pallets, collapsible pallets, cardboard cartons placed on wooden europallets or bundled.

### Certified test report

According to DIN 50049 - EN 10204 - 2.2 or 3.1.

Parameter	Method			
	Sawing 1	Sawing 2	Shearing	Rotary cutt-off
<b>Outside diameter</b>	12–102 mm	10–81 mm	15–152 mm	20–90 mm
<b>Wall thickness</b>	1–3 mm	0,5–7 (12) mm	max. 7% D	0,7–12 mm
<b>Lenghts</b>	20 (130)–3250 mm	15–600 mm	25–780 mm	150–2000 mm
<b>Tolerances</b>	±0,25 mm	±0,025 mm	±0,25 mm	±0,11– ±0,19 mm
<b>Stabilization of production process</b>		CpK > 1,67		CpK > 1,67
<b>Tube ends</b>	Brushing L = 130(250)–3980 mm	Tube ends bevelling		
		D = 10–81 mm L = 15–340 mm 5°–85° (min. d = 12 mm)	D = 15–70 mm L = 30–690 mm	D = 20–90 mm L = 150–2000 mm 5°–85° (min. d = 18 mm)
<b>Surface protection</b>	Washing and passivating at L = 100–3000 mm	Without protection or oiled		

## Butt-welding steel pipe fittings

## List of dimensional standards and technical delivery conditions standards for fittings

---

ŽP-05-04	Buttwelding elbows. TDC.
ŽP-05-05	Buttwelding elbows with specified elevated temperature properties
STN 42 0165	ČSN 42 0165 Sheets and pipes of ferritic-perlitic steel with guaranteed impact properties at low temperatures. TDC.
STN 42 0250	ČSN 42 0250 Hot formed seamless tubes from steel grade 10 to 16.
STN 42 0251	ČSN 42 0251 Seamless steel tubes with specified elevated temperature properties.
ŽP 42 5760	Buttwelding elbows. Dimensions.
ASME B16.9	Factory-made wrought steel buttwelding fittings.
ASTM A106	Seamless carbon steel pipe for high temperature service.
ASTM A234	Piping fittings of wrought carbon steel and alloy steel for moderate and high temperature service.
ASTM A333	Seamless and welded steel pipe for low temperature service (Pipe).
ASTM A420	Piping fittings of wrought carbon steel and alloy steel for low temperature service.
ASTM A860/MSS-SP-75 (MSS for dimension NPS over 14)	Wrought high strength low alloy steel butt welding fittings. (Steel grade WPHY 42, 46, 52, 60, 65, 70). Deliveries upon agreement, NPS above 14 inch.
ASTM A960	Common requirements for wrought steel piping fittings.
ASTM A999	General requirements for alloy and stainless steel pipe.
ASTM A1016	General requirements for ferritic alloy steel, austenitic alloy steel and stainless steel tubes.
DIN 1629	Seamless circular tubes of non-alloy steel with special quality requirements.
DIN 2440	Steel tubes, medium weight suitable for screwing.
DIN 2441	Steel tubes, heavy weight suitable for screwing.
DIN 2519	Steel flanges. TDC.
DIN 2605-1	Elbows. Reduced correlation of utilization.
DIN 2605-2	Elbows. Full correlation of utilization.
DIN 2609	Buttwelding fittings.
DIN 17 172	Steel pipes for long-distance pipelines for combustible liquids and gases.
DIN 17 175	Seamless tubes of heat resistant steel.
DIN 17 179	Seamless circular fine grain steel tubes to special requirements.
BS 1965-1	Buttwelding pipe fittings for pressure purposes. Carbon steel.
BS 3602-1	Steel pipes and tubes for pressure purposes: carbon and carbon manganese steel with specified elevated temperature properties.
NF A49-112	Plain ends seamless steel hot rolled tubes with specified room temperature properties and with special delivery conditions.
NF A49-186	Tubular accessories – bends – reduction for welding, made from seamless tubes for general use. Dimensions. TDC.
NFA 49-281	Steel tubes, tubular accessories, bends, tee, reduction for welding, made from seamless tube with quality specifications. Dimensions. TDC.
EN 764-5	Pressure equipment. Part 5: Metal part check document and material conformity.
EN ISO 3183	Steel tubes for pipeline transportation system
EN 10210-1	Hot finished structural hollow sections of non-alloy and fine grain structural steel.
EN 10216-1, 2, 3, 4	Seamless steel tubes for pressure purposes. TDC. Part 1: Non-alloy steel tubes with specified room temperature properties. Part 2: Non-alloy and alloy steel tubes with specified elevated temperature properties. Part 3: Non-alloy and alloy fine grain steel tubes Part 4: Non-alloy and alloy steel tubes with specified low temperature properties.
EN 10253-1	Buttwelding pipe fittings. Part 1: Wrought carbon steel for general use and without specific inspection requirements.
EN 10253-2	Buttwelding pipe fittings. Part 2: Wrought carbon and ferritic alloy steel with specific inspection requirements.
EN 10297-1	Seamless steel tubes for mechanical and general engineering purposes. TDC. Part 1: Non-alloy and alloy steel tubes.
ISO 3419	Non-alloy and alloy steel buttwelding fittings.
RToD M0803	Dutch rules for pressure vessels. Seamless fittings.

## Dimensions of elbows

### Dimensions of butt welding elbows shape K (90°) and DK (180°) type 3D, produced by European standards

Table 40

Size		Outside diameter (mm)	Wall thickness (mm)	Long radius r (mm)	Height b (mm)	2b (mm)	Elbow weight	
NPS	DN						90° (kg)	180° (kg)

ASME B 16.9	NPS	D			A	O	K

## Dimensional tolerances

Exact values are listed in corresponding standards. Approximate data are shown in the Table 42 of tolerances (page 97).

## Steel

Elbows are made from steel shown in survey table at page 92. At standard DIN 2609 there is shown also steel qualification according to this standard. As a supplement of the survey there is listed also standard and steel grade of tube which is a part of pipeline together with elbow.

Elbow verify according to requirements of standard NACE MR 0103, NACE MR 0175. C-equivalent calculating formula see page 103.

## Heat treatment, delivery condition and surface quality

The elbows are made by hot forming process and they are delivered without heat treatment. Normalising includes normalising forming. Surface quality is corresponding to manufacturing process. Upon agreement - sand blasting of outside surface.

## End preparation

Elbows are delivered with plain ends. Preparation of ends for welding (beveling) according to standards:

- STN, ČSN 13 1075
- ASME (ANSI) B16.9
- DIN 2559
- EN 10 253 and other EN standards
- NFA 29-032 and standards for pipes
- ISO 6761

## Trimming the elbows ends:

DIN	T < 3 mm (Tvar 1)
EN	T < 3 mm
ANSI (ASME)	T < 3 (5) mm
ČSN, STN	T < 2,6 (3-4) mm (according method of welding)

DIN	T = 3-16 mm (Tvar 22)
	2α = 40°-60°, c = do 2 mm
EN	T = 3-20 mm <sup>1)</sup>
	α = 30° 0° +5°
	c = 1,6 ±0,8 mm
ANSI (ASME)	T < 22 mm <sup>2)</sup>
	α = 37,5° ±2,5°
	c = 1,6 ±0,8 mm
	(c = 1/16 ±1/32 inch)
ČSN, STN	T = 3-20 mm
	2α = 70° ±2°
	c = 1,5 +0,5 mm
	(T = 2,9-11 mm)

## Testing

Pipes as a raw material and finished elbows are tested according to corresponding standards.

## Marking

The elbows are delivered with marking:

- without marking
- colour marking - steel grade according to corresponding standard
- stamping of data according to standard, customer's requirements or equipment possibilities (size of elbow).

## Surface protection

The elbows are delivered without surface protection. Temporary protection with oil upon agreement.

## Packaging

Fittings are packed in cartons, placed on wooden pallets, or in matalic box pallets.

## Certificates

Certification in accordance with the following standards:

STN, ČSN 42 0165, 42 0250, 42 0251

ASTM A234/A234, A420/A420M

DIN 50049 - 2.2, 3.1.A, 3.1.B, 3.1.C

EN 10 204 - for EN 10253-1 - 2.2 (non-specific testing)

- for EN 10253-2 - 3.1.B (specific testing) eventually 3.1.A, 3.1.C, 3.2 (see also page 7)

### Notes to page 94:

- In standard EN 10253 (fittings) there is possibility to complete preparation of ends for welding also by beveling of outside edge on 30° and inside edge on 18° to axle of fitting (upon agreement only).
- Values are valid for products, where beveling is according standard ANSI B 16-25.
  - The values for beveling of ends according standard API 5L and for pipes according to ASTM A (ASME SA) are identical with standard EN. In case of preparation of inside edge angle can not exceed 7° to longitudinaly axle ( $T \leq 10,5$  mm) and 9,5° to T 10,5 – 14 mm. (upon agreement only).
  - Pipe according to API 5 CT are delivered with square cut plain ends.

### Sulfide Stress Cracking (SSC) Resistant Metallic Materials - Requirements

Material requirements for sulfide stress cracking are specified in american standards, „NACE STANDARD MR“

The NACE MR0175 standard, also known as ISO 15156 (International Standard) was developed for the prevention of sulfide stress cracking due to  $H_2S$  in oil and gas production system.

The NACE MR0103 standard was developed to be a refinery-specific sour service materials standard. The standard provides recommendations on which alloys and materials to use to prevent sulphide stress cracking in an  $H_2S$  containing environment.

Note: acronym “NACE” Has more meanings than one. “NACE” code means “Classification of Economic activities” which in Slovakia was known until now as “OKEC”. In our case “NACE International” is the leading international organization focusing on corrosion of materials. Current name is derived from the acronym of this organization “National Association of Corrosion Engineers”, which was founded in USA to address corrosion protection of tubings and pipes. Specifications of this American organization NACE International THE CORROSION SOCIETY labeled as NACE Standard MR (Standard Material Requirements) are establishing materials suitable to use in environment where there is Hydrogen Sulphide present.

Allowed sizes and shapes tolerances of butt welding elbows

## Steel tube reducers

List of standards for tube reducers

Standards	Dimensional standards	Dimensions	TDC	Steel grade
<b>STN, ČSN</b>	13 2200 13 2380 (13 2385)	Tab. 42	13 2370	11 353 12 021
<b>DIN</b>	2616 - 2		2609 (A) 2609 (F, G)	St 37.0 St 35.8
<b>ISO</b>	3419		3419	
<b>EN</b>	10 253 - 1		10 253 - 1	S 235, S 265

Upon agreement it is possible to deliver reducers made also from other steel (see survey table of butt welding elbows - page 92).

### List of dimensional standards and technical delivery conditions standards

STN, ČSN 13 2200	Steel pipe fittings for butt welding. Construction dimensions.
STN, ČSN 13 2370	Reducers. TDC.
STN, ČSN 13 2380	Reducers Js 20 – Js 350, Jt 40 – Jt 100.
STN, ČSN 13 2385	Reducers DN 20 – DN 500, PN 40 – PN 100.
DIN 2609	Butt welding fittings. TDC.
DIN 2616-2	Reducers. Full correlation of utilization. E
N 10 253-1	Butt-welding pipe fittings. Part 1: Wrought carbon steel for general use and without specific inspection requirements.
ISO 3419	Butt welding fittings wrought carbon and alloy steel.

GOST 17378 Reducers. Dimensions.  
GOST 17380 Reducers. TDC.

### Dimensions of concentric reducers - type 1

Table 43

Side D				Side D1				Length L [mm]	Theoretical weight [kg]

## Continuously cast steel blooms

Steel blooms are the starting material for the production of seamless hot finished tubes and pipes. They are also used for the production of other metallurgical semi products by hot forming (rolling, forging, pressing).

### Dimensions and tolerances

#### Dimensions and dimensional tolerances of steel bloom - square cross-section

Table 44

Square side [mm]	Tolerances [mm]	Sidelong max* [mm]	Cross-section area [mm <sup>2</sup> ]	Weight [kg/m]	Edge of the bloom [mm]
125	±3	5	15 600	120,0	R = 3 mm ±1 mm
150	±3	6	22 420	175,5	R = 3,5 mm ±1 mm
160	±3	6	25 600	199,7	R = 4,5 mm ±1 mm
180	±3	7	32 100	252,7	R = 5,5 mm ±1 mm
200	±4	7	39 680	312,0	R = 6,5 mm ±1 mm
205	±4	7	40652	319,5	R = 40 mm ±2 mm
225	±5	9	50 170	394,8	R = 7 mm ±1 mm
280	±6	11	76 662	615,0	R = 7,5 mm ±1 mm

\* Difference of diagonals of square

#### Dimensions and dimensional tolerances of steel bloom - circular cross-section Tabulka 45

Diameter [mm]	Tolerances [mm]	Ovality [mm]	Cross-section area [mm <sup>2</sup> ]	Weight [kg/m]
150	±3	3	17 662	138,5
180	±3	5	25 434	199,6
210	±4	5	34 618	270,0
240	±4	6	45 216	352,7
260	±4	6	53 066	414,0
280	± 6	7	61 575	475,0

### Lengths

The blooms are delivered in lengths of 4 000 – 10 000 mm with length tolerance of +50 mm.

Straightness tolerance - 1% of length

Obliqueness of front side - 5°

### Steel quality

The steel is produced by electric process and is fully killed. The chemical composition of the steel is determined by standards and steel grades for individual groups of tubes. It is also possible to deliver blooms from other steel grades to meet specific customer requirements.

Element content in % of weight																	
	C	Mn	Si	Cr	Mo	Ni	V	S	P	Cu	Sn	Al	Ti	B	Nb	O	N
<b>min</b>	0,05	0,3	0,1	0,05	0,05	max	0	max	max	max	max	0,005					
<b>max</b>	1,2	2,5	1,3	2,5	1,1	3,4	0,8	0,035	0,035	0,40	0,040	0,050	0,050	0,001	0,050	0,035	0,010

Gases volume: O max. 0,0035% (35ppm), H max. 0,0050% (50ppm), N max 0,010% (100 ppm) - according agreement max. 0,008%.

Conversion: a (%) x 10 000 = b (ppm). (But the using of ppm is in system SI non-permissible).

### Heat treatment, delivery condition and surface quality

After casting the blooms are not heat treated, nor is the surface treated. Blooms are delivered according to technical delivery requirements.

### Testing

Blooms are tested according to appropriate standards.

### Marking

Blooms are stamped on their face. Markings include: heat number, steel grade code, stream number. In special cases blooms are marked with colour.

### Laying of blooms

Square cross-section – in layers

Circular cross-section – in special wooden pads or bound with steel strip.

### Certification

Test report certificate in accordance with the specification: DIN 50049, EN 10204 – 3.1 or others.

# ATTACHMENT AND SUPPLEMENTS

## Tube packaging

On request or according to standard tubes and pipes are delivered with ends closed with plastic plugs or caps.

### HOT FINISHED TUBES AND PIPES

The tubes are shipped in round bundles with diameter max. 800 mm, max. mass is 3 500 kg.

On request hexagonal bundles.

#### Standard methods:

The bundle binded by wire

The bundle binded by steel strap

Steel strap underlayered by paper tape (tapaten)

#### Non – standard methods:

The ends of bundle are wrapped in PE-foil or tapaten and foil

### PRECISION COLD DRAWN TUBES

The tubes are shipped in round bundles with diameter max. 800 mm, max. mass is 2 000 – 2 500 kg.

On request hexagonal bundles.

#### Standard methods:

The bundle binded by steel strap

Steel strap underlayered by tapaten

#### Non-standard methods:

The bundle is wrapped in PE-foil

The ends of bundle are wrapped in PE-foil or other material

Wooden mats round the bundle as a mechanical protection

Wooden box- tubes are in box lose or in bundle

Combinations of various types of packaging

### PIPE FITTINGS

Metal boxes

Cardboard boxes on wooden palette

### TUBE SEMIPRODUCTS

#### Standard methods:

Metal boxes (840 x 1 240 x 860 mm)

Hexagonal bundles

Hydraulic tubes are shipped in round bundles with mass max. 2 000 kg and length of 6 m binded by steel strap

#### Packaging according to customer requirements:

Cardboard boxes on wooden palette

Wooden boxes (mass max. 1 000 kg)

Large-volume bags BIG-BAG

Palettes of wooden prisms

## Tests for mechanical and technological properties of tubes

Selection of tests shall be governed by relevant standards that apply to individual products. The values apply for dimension and material condition specified in the standards. Unless otherwise specified, tests relate to samples taken longitudinally

### Mechanical testing

---

#### Tensile test at room temperature (Zugversuch bei Raumtemperatur)

Determined values:

The upper yield strength  $R_{eH}$  or the 0,2% proof strength  $R_{p0,2}$  (MPa)

The tensile strength  $R_m$  (MPa)

Elongation  $A_{min}$  (%)

EN 10002/1 - replaced by EN ISO 6892-1, DIN 50 145, ČSN 42 0310, ASTM A370 (ASME SA 370)

#### Tensile test at elevated temperature (Zugversuch bei erhöhter Temperatur)

Determined values:

The proof strength at the agreed temperature  $R_{p0,2}$  (MPa)

EN 10002-5, DIN 50 145, ČSN 42 0312

#### Hardness test (Härteprüfung) (according to agreement and possibilities)

Detected values:

Brinell: EN 10003, EN ISO 6506, DIN 50 351, ČSN 42 0371, ASTM E 10

Rockwell: EN 10004, EN ISO 6508, DIN 50 103, ASTM E 18

Vickers: EN ISO 6507, DIN 50 133, ASTM E 92, ASTM E 384

Conversion table hardness to R: DIN 50 150

#### Impact test at 20°C (Kerbschlagbiegeversuch bei 20°C)

##### Impact test at low temperatures (Kerb. bei niedrigen Temperaturen)

The possibility of execution of examination is depended on dimensions of tubes

Determined values:

Minimum average absorbed energy  $KV$  (impact energy) (J)

EN ISO 148-1, DIN 50 115, ČSN 42 0381, ASTM A370 (ASME SA 370)

#### Creep testing (Langzeitwarmfestigkeit)

The creep rupture properties shall not be subject to verification, the steels are tested at verification of products technology

Determined values:

The creep proof strength (Zeitdehngrenze)  $R_T(t/A/T)$  is the tension, which in time  $t$  at temperature  $T$  bring about  $A$  % of middle durable relative elongation of length of test specimen.

E.g.  $A = 1\%$ ,  $t = 10\,000$  hours,  $T = 500^\circ\text{C}$  -  $R_T 10\,000/1/500 = 70$  MPa

The creep rupture strength (Zeitstandfestigkeit) -  $R_{mT}(t/T)$  is the tension, at which durable activity at temperature  $T$  is middle time  $t$  until fracture of specimen.

E.g. tension 100 MPa results in the time  $t = 10\,000$  hours and at temperature

$T = 600^\circ\text{C}$  the fracture of component -  $R_{mT} 10\,000/600 = 100$  MPa

Data are presented in annexes of standards and can be used for calculations.

At the present time is used second value and for stability calculations is compared in under creep area with proof strength at elevated temperature. For calculations is used always lower value.

EN ISO 204

EN 10291 +Bbl 1, ČSN/STN 42 0351 (42 0302), ASTM E139

**Fatigue testing** – test is not included in standards for tubes and pipes

## Technological testing (Manipulating tests)

---

When tested in accordance with related standards the test piece shall withstand being tested without cracking. The following tests are made to prove ductility of tubular products :

**Bend test (Biegeversuch)** – (in full size tubular sections).

Test is used for pipe in sizes 2 in. or 65 mm and under. In this test a sufficient length of full size pipe is bent cold through (90°) around a cylindrical mandrel having a diameter e.g. 12 times the nominal diameter of the pipe. EN ISO 8491, ASTM A 370 (A 2,A 2.5), ČSN 420415.3

**Flattening test (Ringfaltversuch)**

The test piece shall be flattened at room temperature between parallel flat platens until the distance between the platens H (in mm) measured under load reaches the value given by the equation in standard. Tested are tubes - D shall be 600 mm and under and with T shall be 15% of D and under. EN ISO 8492, DIN 50 136, ASTM A 370 and standards for tubes and pipes, ČSN 42 0415.4.

**Flaring test (Drift expanding test)/ (Aufweitversuch)**

The test piece shall be expanded by a tapered mandrel, having an included angle of 60° at the option of the manufacturer until the percentage increase in outside diameter shown in tables in standards is reached. D shall be 150 mm and under and T shall be max. 10 mm. EN ISO 8493, DIN 50 135, ASTM A 370, ČSN 42 0415.5.

**Flanging (Flange) test (Bordelversuch)**

The test piece shall have a flange turned over at right angles to the body of the tube to the width required by the applicable material specifications. D max 150 mm, T max. 10 mm. EN ISO 8494, DIN 50 139, ASTM A 370, ČSN 42 0415.6.

**Ring-expanding test (Ringaufdornversuch)**

The test piece shall be expanded with a conical tool until it breaks. The surface outside the fracture zone shall be free from cracks or breaks. D 18-150 mm (114,3 mm), T 2-16 mm (12,5 mm). EN ISO 8495, DIN 50 137, ČSN 42 0415.7.

**Ring tensile test (Ringzugversuch)**

The test piece shall be subjected to strain in the circumferential direction until fracture occurs. After fracture the test pieces shall not show any visible cracks without the use of magnifying aids (excluding the fracture point).

D above 150 mm, d above 100 mm and T 40 mm and under. EN ISO 8496, DIN 50 138.

## Others additional technological tests

---

**Crush test (upsetting test) (Anstauchen test)**

The test piece is placed on end and crushed endwise by hammer or press to the distance prescribed by the applicable material specifications.

**Reverse flattening test (Reversionringfaltversuch)**

For testing of welds of electric welded tubing

**(Transverse guided) Bend test of welds (Biegeprüfungen von Schweissnahten)**

This bend test is used to determine the ductility of fusion welds.

### ISO 377

Steel and steel products - Location and preparation of samples and test pieces for mechanical testing

## Tube suitability for hot dip galvanization

---

All structural steels are possible to hot dip zinc, but quality, appearance and thickness of coating influences the chemical composition of steel (the content of Si + P).

For general structural steels is recommended to keep the content of Si + P in range 0,13 %–0,28 %.

## Carbon equivalent

---

**CEV (IIW)**

Carbon Equivalent Value (CEV) according to the International Institute of Welding (IIW).

$$CE = \%C + \frac{\%Mn}{6} + \left( \frac{\%Cr + \%Mo + \%V}{5} \right) + \left( \frac{\%Cu + \%Ni}{15} \right)$$

## The tightness of tubes under the ASTM (ASME) regulations

Within limits it is necessary to use in preference the methods of NDE (NDT), especially for cold finished tubes. If hydrostatic test is agreed, for the test pressure value calculation is valid:

### ASTM A450 and ASTM A 1016 (Tube)

Minimum hydrostatic test pressure is determined by the following formula:

Inch - Pound units:  $P = 32000 t / D$  (psi) SI units (mm):  $P = 220,6 t / D$  (MPa)

The minimum hydrostatic test pressure need not exceed these values:

D (in., mm)	Pressure P (psi, MPa)
Under 1 (25,4)	1 000 (7)
1- under 1 1/2 (25,4 - under 38,1)	1 500 (10)
1 1/2 - under 2 (38,1 - under 50,8)	2 000 (14)
2 - under 3 (50,8 - under 76,2)	2 500 (17)
3 - under 5 (76,2 - under 127)	3 500 (24)
5 and over (127 and over)	4 500 (31)

The values are valid for ASTM A 450, for ASTM A 1016 is valid value 1000 psi - 7 MPa

Higher pressure according to agreement. The tube wall stress shall be determined by the following equation:

$S = PD / 2t$  (psi, MPa).

(The standards do not specify the amount of tension S as a share of 60% min. yield strength)

### ASTM A 530 and A999 (Pipe)

Each length of pipe shall be tested to a hydrostatic pressure which will produce in the pipe wall a stress not less than 60% of the minimum specified yield strength for C-steel pipe:

$P = 2 St / D$  (inch or mm, psi or MPa)  $S = PD / 2t$

The minimum hydrostatic test pressure need not exceed 2500 psi (17,0 MPa) for pipe 3,5 in or 2800 psi (19,0 MPa) for pipe over 3,5 in (88,9 mm)

Upon agreement it is possible to test with higher pressure too.

The values of pressures are also in tables of relevant standards TDC - ASTM A.

For comparison - pressure according to formulas based on EN is in bars.

## Definition of status and nomenclature of heat treatment

### Delivery conditions and heat treatment according to DIN and EN

Precision tubes are delivered in following conditions (first symbol lists previous designation, the new one according to EN is in brackets):

<b>+C (BK)</b>	<b>Cold finished/hard</b> (cold finished as drawn). No heat treatment after last cold forming process.
<b>+LC (BKW)</b>	<b>Cold finished/soft</b> (lightly cold worked). After last heat treatment there is a light finishing pass (cold drawing).
<b>+SR (BKS)</b>	<b>Cold finished/stress relieve annealed.</b> After the final cold forming process the tubes are stress relieve annealed.
<b>+A (GBK)</b>	<b>Annealed.</b> After the final cold forming process the tubes are annealed in a controlled atmosphere.
<b>+N (NBK)</b>	<b>Normalized.</b> After the final cold forming process the tubes are annealed above the upper transformation point in a controlled atmosphere.

### Material condition designation depending on heat treatment according to ČSN and STN (first supplementary number behind steel grade):

- 0 - without heat treatment
- 1 - normalized
- 2 - annealed (kind stated)
- 3 - soft annealed
- 4 - quenched and tempered
- 5 - normalised and tempered
- 6 - heat treatment with the object of achieving a minimum tensile within a specified range
- 7 - heat treatment with the object of achieving a average tensile within a specified range
- 8 - heat treatment with the object of achieving a maximum tensile within a specified range
- 9 - specific (upon agreement)

### Steel condition designation according to ASTM A519:

- CW - Cold Worked
- A - Annealed
- N - Normalized
- SR - Stress Relieved or Finished Annealed
- QT - Quenched and Tempered

## Steel designation according to EN

### Designation of steels for construction and general use

S – structural steel

235 – minimum yield strength in N/mm<sup>2</sup>

Signs at the end of steel designation – additional symbols for steel names

• non-alloy steel

J – impact test, min. average absorbed energy KV – 27J

R – room temperature

0 – temperature 0°C

2 – temperature -20°C

H – hollow section

• fine grain steel (ferritic grain size equal to or finer than 6)

basic series                    N – normalized structure

H – hollow section

low temperature series    N – normalized structure

L – low temperature series

H – hollow section

Fine grain structural steel designation according to DIN 17124

StE        – basic series (-20 °C)

TStE      – deep-drawing series with minimum absorbed energy at temperature of -50 °C

EStE      – deep-drawing series with minimum absorbed energy at temperature of -60 °C

255        – minimum yield strength in N/mm<sup>2</sup>

### Designation of steels for machine parts

• **steel for tubes for mechanical treatment:**

steel E355 + AR, E 355 + N

E – steel for machine parts, 355 – minimum yield strength in N/mm<sup>2</sup>, +AR – heat treatment is not required,

+N – normalising annealed or formed

steel 20MnV6

steel designated by chemical composition – guaranteed mean C content 0,20%, guaranteed content Mn and V

+AR – heat treatment is not required, +N – normalising annealed or formed

• **steel for machine parts:**

steel without heat treatment after mechanical treatment

non-alloy steel E 235, E275, E315, E355

Condition +AR or +N

steel with specific impact qualities (fine-grain) E275K2, E355K2

K2 – guaranteed characteristic of impact energy 40 J (K) by temperature -20 °C

steel with heat treatment after mechanical treatment

steel C22E

C – steel with carbon content 0,22%, E – reference to maximum checked content of S and P

steel 38Mn6

– guaranteed mean C content and guaranteed Mn content

## Boiler steel designation

- base non-alloy steel
  - P – steel for pressure equipments
  - 235 – minimum yield strength in N/mm<sup>2</sup>
  - G – general characteristic, devise to second symbol
  - H – high temperature
- alloy steel
  - steel designated according to chemical composition (PED 97/23EC and AD 2000 - W4)

## Designation of steel for low temperature

- P – steel for pressure equipments
  - 215 – minimum yield strength in N/mm<sup>2</sup>
  - N – normalized or normalising formed
  - L – low temperature steel
- Alloy steels are designated according to the chemical composition (PED 97/23EC and AD 2000 - W4)

## Designation of steels from fine grain steel

- P – steel for pressure equipments
- 355 – minimum yield strength in N/mm<sup>2</sup>
- N – normalized or normalising formed
- NH – high temperature steel
- NL1 – low temperature steel
- NL2 – special low temperature steel (PED 97/23EC and AD 2000 - W4)

## Designation of steels for elevated temperature

- P – steel for pressure equipments
- 235 – minimum yield strength in N/mm<sup>2</sup>
- T – steel for tubes
- R – room temperature
- 1, 2 – group of quality
- TR 1 – Fluid Transportation - General Purposes (see page 52)
- TR 2 – Piping and Pressure Purposes (PED 97/23EC and AD 2000 - W4)

## Conversion table of steel parameters

US units	SI	SI	US units
1 inch	25,4 mm	1 mm	0.03937 inch
12 inches = 1 foot	304,8 mm	1 m	3.2808 feet
1 sq inch	645 mm <sup>2</sup>	1 mm <sup>2</sup>	0.00155 sq inch
1 sq foot	0,093 m <sup>2</sup>	1 m <sup>2</sup>	10.753 sq feet
1 cubic foot	0,02831685 m <sup>3</sup>	1 m <sup>3</sup>	35.31 cubic feet
1 pound (1lb)	0,453592 kg	1 kg	2.20462 lbs
1 short ton (US)	0,907185 metric t	1 metric t	1,10231 short ton
1 long ton (UK)	1,01605 metric t	1 metric t	0,9842 long ton
1 ksi	6,894757 Mpa	1 Mpa	0,145038 ksi

Units: inch (in)  
foot (ft)  
pound (lb)

Temperature: °C = 5/9 (°F – 32)  
°F = 9/5 °C + 32

Conversion of weight to length – C-steel:

Dimensions in mm: 0,0246615 (D – T).T (kg/m)

Dimensions in inch: 10,68142 (D – T).T (lbs/ft)

Weight conversion: kg/m = 1,48816 lb/ft

lb/ft = 0,67197 kg/m

Pressure conversion:

1 Pa = 1 N/m<sup>2</sup>

1 MPa = 1 N/mm<sup>2</sup>

1 MPa = 10,1972 at

1 MPa = 10<sup>6</sup> Pa = 10 bar

1 at = 1 kp/cm<sup>2</sup> (old unit)

1 at = 0,09806 MPa

1 at = 0,98066 bar

1 bar = 1,01972 at (tech)

1 bar = 100 000 Pa (100 kPa)

1 bar = 14,504 psi

1 psi (pound per square inch) = 1 lb/in<sup>2</sup>

1 psi = 0,006894757 MPa (6 895 kPa)

1 psi = 0,06894 bar (0,070307 at)

1 ksi = 1 000 psi = 6,895 (6,9) MPa

# Indicative comparison of steels

## Steels for alloy treatment and cementation - carbon, Type C according to EN

From point of view of chemical composition are identical following steels:  
 E155 = E190, E195 = E220, E235 = E260, E275 = E320, E355 = E370 in standard EN 10305-3.

Steel 25CrMo4 is steel for machinery parts.

In EN 10216-2 is as boiler steel with reduced contents of P and S and guaranteed contents of Al.

Values from standards DIN 50150, EN ISO 18265, ISO/TR 10108, ASTM E 140

Table 57

Designation system for steels - EN 10027-2				
<p><b>1 . XX XX(XX)</b></p> <p>Sequential number (digits in brackets are for possible future use)</p> <p>Steel group number</p> <p>Material group number 1 = Steel</p>				
Steel groups		Steel group number	Characteristic	
Non-alloy steels	B	Base steels	00 or 90	base steels
	Q	Quality steels	01 through 06 or 91 through 96	quality steels are divided into groups according to the maximum strength Rm and the average carbon content
			07 or 97	free-cutting steel
	S	Special steels	10	steels with special physical properties
11, 12, 13			structural, pressure and engineering steels	
15, 16, 17, 18			tool steels	
Alloy steels	QS	Quality steels	08, 09 or 98, 99	steels with special physical properties and steels for other applications
	SS	Special steels	0 20 21, 22, 23 24 až 26 27 28	<b>tool steels</b> - alloyed Cr - alloyed Cr+Si, Mn, V, Mo - alloyed W+Cr, V - alloyed Ni - other
			32, 33 35 36, 37 38, 39	<b>miscellaneous steels</b> - high speed steels - bearing steels - materials with special magnetic properties - steels with special physical properties
			40, 41, 43, 44 45 46 47, 48 49	<b>stainless and heat resisting steels</b> - stainless steel sorted according to the content of Ni - stainless steel with special additions - chemical resistant and high temp Ni alloys - heat resistant steels - material with elevated temperature properties
			50 až 53 54 55 56 57, 58, 59, 60 62, 63 65, 66, 67, 68, 69 70 71 72, 73 75, 76, 77 79, 80, 81, 82, 84 85 87 88, 89	<b>structural, pressure vessel and engineering steels</b> - alloyed Mn+Si, Cu, Cr, V, Ti - alloyed Mo, Nb, Ti, V, W - alloyed B, Mn-B - alloyed Ni - alloyed Cr-Ni - alloyed Ni and other elements Si, Mn, Cu, Mo, Mn, V - alloyed Cr - Ni - Mo and other elements - alloyed Cr a Cr-B - alloyed Cr+Si, Mn, B - alloyed Cr-Mo - alloyed Cr+V, Mo - alloyed Cr+Si, Mn, Mo, V, Ti, W - nitriding steels - steels not for treatment by user - high strength weldable steels not for heat treatment by user

## Contacts

**ŽELEZIARNE PODBREZOVÁ A.S.**  
Kolkáreň 35, 976 81 Podbrezová  
Slovak Republic  
+421/48/645 1111  
www.zelpo.sk, www.steel tubes.sk  
admin@zelpo.sk, marketing@zelpo.sk

### Marketing

+421/48/645 3014, 3010

### Sales

• Sales of cold-drawn tubes:

+421/48/6453041, 6453045, 6453034

• Sales of hot-finished tubes:

+421/48/6453041, 6453045, 6453034

• Sales of elbows and reducers:

+421/48/6453041, 6453045, 6453034

• Sales of tube semiproducts:

+421/48/6453076

• Sales of steel blooms:

+421/48/6453041, 6453045, 6453034

• fax:

+421/48/645 3032, 6453042, 6453072

### Commercial representatives:

#### PIPEX Italia S.p.A.

Via Paleocapa 10, 28041 Arona (Novara), Italia  
tel.: +39/0322/235511  
fax: +39/0322/44688  
e-mail: info@pipex.it, www.pipex.it

#### Pipex Deutschland GmbH,

Freseniusstrasse 17, 81247 Munich, Germany  
tel: 0049 (0)89 8110074  
fax: 0049 (0)89 8110233  
e-mail: info@pipex-deutschland.de, www.pipex-deutschland.de

#### ŽP TRADE Bohemia a.s.

Ztracená 272, 161 00 Praha 6, Czech Republic  
tel.: +420/235 301 190, 235 300748  
fax: +420/235300748  
e-mail: info@zptrade.cz, www.zptrade.cz

#### SLOVRUR Sp. z o.o.

ul. Brandwicka 138, 37-464 Stalowa Wola, Poland  
tel.: +48/15/844 8045-6, 8448051, 8448095  
fax: +48/15/8420234  
e-mail: dz.handlowy@slovrur.pl, www.slovrur.pl

#### TRANSFORMACIONES METALÚRGICAS, S.A.U.

Calle Joan Draper i Fossas, 30  
08350 Arenys de Mar, Barcelona, Spain  
tel: +34 93 7549200, fax: +34 93 7523847
